REVISED ENGINEERING REPORT

**WBGX, 1570 KHZ
HARVEY, ILLINOIS**

MARCH 13, 2006

After a revised study was performed on the WBGX, 1570 kHz, Harvey, Illinois proposed Day Antenna System; overlap to co-channel Stations was indicated.

A modified Array design was performed at a reduced Input power to remove overlap to WFUR, Grand Rapids, Michigan. Existing overlap to Stations WFRL and WIL0 is not increased and is actually reduced.

The following Attachments 1-4 show the proposed revised Antenna Array and existing/proposed contours. The Form 301 is modified to reflect these changes.

Kurt Gorman, President
