

**MINOR MODIFICATION TO
W258BU (FORMERLY W205CI)) - BPFT-20091211AEB**

This technical report has been developed in support of a minor modification to the W258BU CP (BPFT-20091211AEB) as constructed. A form 350 license application for the constructed facility has been filed prior to the filing of this modification application.. The facility will be combined with translator W250BC facility on the same tower (ASR#1223132) with 99 watts ERP as a fill in translator for station WWWQ, on 259C0 licensed to Atlanta, GA (facility ID #73345). E2 demonstrates 60 dBu overlap with the constructed facility.

The data for all terrain utilized in this report and application exhibits were obtained from the V-Soft NGDC 3 second terrain database. Exhibits provided are:

- E1 Channel Study**
- E1A Interference plot to Lawrenceville, GA application**
- E1A1 FMOVER analysis to Lawrenceville, GA application**
- E1B Interference analysis to WSB-FM and WWWQ**
- E1C DA pattern**
- E2 W258BU existing and proposed 60 dBu and WWWQ 60 dBu plot**
- E3 W258BU proposed HAAT tabulation**
- E4 Aerial photo of tower site**
- E5 Tower ASR**

Allocation analysis and WSB-FM and WWWQ Interference Calculations:

Exhibit E1, E1A and E1A1 demonstrate that the proposed facility does not cause interference to any protected facilities. The W250BC measured pattern for the Shively Shively 6014-1/3 antenna is utilized to achieve clearance to the Lawrenceville, GA 255D application.

The proposed W258BU operation on channel 256 is located well inside the 3rd adjacent channel WSB-FM channel 253C0 and WWWQ's 259C0 facilities' 60 dBu contours. Therefore, the interference ratio is utilized to determine the actual W258BU proposed interference contour, in accordance with FCC-02-244, paragraph 12. Exhibit E1B shows that WSB-FM places a 109.3 dBu (50, 50) contour at the proposed W258BU tower site. Adding the 40 dBu 3rd adjacent channel interference ratio yields an interfering contour of 149.3 dBu (50, 10) at 3.8 meters. Therefore, it is obvious that the interference contour will not encompass any buildings or roads where radio reception is possible. In

Anderson Communications, LLC

fact, the proposed antenna is at an elevation of 324 meters AGL on an existing tower and will not reach the ground. Exhibit E4 shows that there are no tall buildings or highways within 3.8 meters. Since the proposed W258BU facility and WWWQ are collocated, it is clear that the interference contour to that facility will be less than 3.8 meters. **A waiver of section 74.1204 is requested in accordance with well-established Commission precedent.**

W258BU Antenna and RF exposure calculation:

W229AG will be combined with 250BC at a COR AGL of 324 meters on an existing tower, ASR # 1223132 at coordinates:

33-48-26 N 84-20-22 W (NAD 27).

The RF contribution from the 0.099 kW facility was evaluated using the formula:

$$S \text{ (RF in microwatts/cm}^2) = \frac{33.4 \text{ (F2 - Vert Factor)} X (\text{H ERP} + \text{V ERP in watts})}{R^2 \text{ (distance to radiation center in meters)}}.$$

Based on a worst case F factor of 1.0, the RF contribution was calculated to be 0.063 $\mu\text{Watts}/\text{cm}^2$ or 0.032% of the general public exposure limit, and well below the 5% level that is excluded from consideration.

Conclusion:

It is concluded that the minor modification of W258BU will comply with all Commission rules and policies.

Charles M. Anderson
