ENGINEERING STATEMENT OF RYAN WILHOUR OF THE FIRM OF
KESSLER AND GEHMAN ASSOCIATES, INC., CONSULTING ENGINEERS IN
CONNECTION WITH A DIGITAL CLASS A LPTV FLASHCUT APPLICATION
FOR PENTECOSTAL REVIVAL ASSOCIATION, INC.

WJGV-LP (BLTTL-20010614ADP)

PALATKA, FLORIDA

NARRATIVE STATEMENT

This firm has been employed by the Pentecostal Revival Association, Inc. (“PRA”) to prepare engineering studies and the engineering portion of FCC Form 301-CA for a digital flashcut modification to the above referenced licensed LPTV Class A broadcast facility.

ENGINEERING ANALYSIS

The instant application proposes to make the following changes:

- Change the emissions designator from analog to digital (with a stringent mask)
- Rotate the existing antenna 180 degrees from its licensed orientation.
- Decrease the ERP from 21.6 kW to 1.8 kW

In carrying out the engineering studies the following attached exhibits were prepared:

1. Proposed engineering specifications (Exhibit E1)
2. Elevation drawing of the antenna system (Exhibit E2)
3. Antenna azimuth and elevation patterns (Exhibit E3)
4. USGS 7.5 minute topographic quadrangle showing the proposed transmitter location

and coordinate lines (Exhibit E4)

5. Map demonstrating the proposed and licensed coverage contours (Exhibit E5)
6. Demonstration of interference compliance (Exhibit E6)
7. Environmental impact / RFR hazard analysis and methodology (Exhibit E7)

INTERFERENCE ANALYSIS

The applicant accepts full responsibility for the elimination of any objectionable interference including that caused by intermodulation to facilities in existence or authorized prior to the grant of this application.

Evaluation toward Class A Stations

No Spacing violations or contour overlap to Class A stations exist.

Evaluation toward Landmobile Stations

No landmobile spacing violations exist.

FCC Monitoring Stations

The proposed station is compliant with regard to FCC Monitoring Stations.

West Virginia quiet zone

The proposed station is compliant with regard to West Virginia quiet zone.

Table Mountain

The proposed station is compliant with regard to Table Mountain.

Canadian coordination distance

The proposed facility is beyond the Canadian coordination distance.

Mexican coordination distance

The proposed facility is beyond the Mexican coordination distance.

KESSLER AND GEHMAN ASSOCIATES, INC.

AM broadcast stations

The proposed station is compliant with regard to AM broadcast stations.

NTSC and DTV

The following stations were analyzed for potential interference:

None of the stations above are predicted to receive non-compliant interference as demonstrated in Exhibit E6.

ENVIRONMENTAL IMPACT / RFR HAZARD ANALYSIS

An analysis has been made of the human exposure to RFR using the calculation methodology described in OET Bulletin 65, Edition, 97-01. Exhibit E7 is a RFR study demonstrating compliance within 5% of the most restrictive permissible exposure at any location 2 meters above the ground (See Methodology). Exhibit E7 calculations were made using a frequency of 674 MHz, which is the lower edge of the proposed channel. To account for ground reflections, a coefficient of 1.6 was included in the calculations.

Pursuant to OET Bulletin 65 concerning multiple-user transmitter sites only those licensees whose transmitters produce power density levels greater than 5.0% of the exposure limit are considered significant contributors to RFR. Since the proposed operation is well within 5% of the most permissible exposure at any location 2 meters above the ground, it is not considered a significant contributor to RFR exposure. Thus, contributions to exposure from other RF sources in the vicinity of the proposed facility were not taken into account. The instant proposal complies with the FCC limits for human exposure to RF radiation and thus is excluded from further environmental processing.

The applicant will cooperate with any other users of the tower by reducing the power to the

antenna or if necessary completely cutting it off in order to protect maintenance workers on the tower.

DECLARATION OF ENGINEER

I, Ryan Wilhour, declare and state that I am a graduate electrical engineer with a Bachelor of Science in Electrical Engineering and my qualifications are a matter of record with the Federal Communication Commission, and that I am an engineer in the firm of Kessler and Gehman Associates, Inc., and that firm has been retained by GPTC to prepare the herein application.

The foregoing statement and the report regarding the aforementioned engineering work are true and correct to the best of my knowledge. Executed on January 31, 2007.

KESSLER AND GEHMAN ASSOCIATES, INC.

Ryan Wilhour
Consulting Engineer

ENGINEERING SPECIFICATIONS

A. Transmitter Site (NAD 27):

N. Latitude: 29° 34' 48"

W. Longitude: 81° 41' 59"

FCC Tower Registration Number: 1054337

FAA Study Number: 89-ASO-612-OE

B. Proposed Facility:

Channel: 48

Frequency: 674-680 MHz

Emission Mask: Stringent

C. Antenna and Other Elevations:

Height of Site Above Mean Sea Level (AMSL) 4 m

Overall Height of Structure Above Ground 110 m
(including all appurtenances)

Overall Height of Structure Above Mean Sea Level 114 m
(including all appurtenances)

Average Terrain 8 m

Effective Height of Antenna Above Ground 105 m

Effective Height of Antenna Above Average Terrain 101 m

Effective Height of Antenna Above Mean Sea Level 109 m

D. Antenna Parameters - Horizontal Polarization:

Average TPO Power Required Watts 83 W

Average TPO Power Required dBW 19.08 dBW

Transmission Line Loss 1.03 dB

Maximum Antenna Gain in Beam Maximum 14.38 dBd

Maximum Effective Radiated Power 32.55 dBW

In Beam Maximum 1.8 kW

METHODOLOGY AND EXPLANATION OF
ENVIRONMENTAL IMPACT / RADIO FREQUENCY RADIATION
HAZARD ANALYSIS

A theoretical analysis has been conducted of the human exposure to radio frequency radiation (“RFR”) using the calculation methodology described in *OET Bulletin 65, Edition 97-01*. The RFR analysis is conducted pursuant to the following methodology:

Terrain¹ extraction is compiled from the proposed tower site to radial lengths of 0.25 miles in 0.001 mile increments for 360 radials. The power density is calculated for each terrain point at 6 feet above ground level using the elevation and azimuth pattern of the proposed broadcast antenna. The power density calculations are conducted using the lower edge of the proposed channel frequency. To account for ground reflections, a coefficient of 1.6 was included in the calculation.

The resulting cylindrical polar analysis is then summarized into a coordinate plane graph using the following methodology:

Starting from the origin the maximum calculated RFR value is determined among the 360 degree radials for each 0.001 mile increment, the value is then converted into a percentage of the maximum allowable general population or uncontrolled exposure and plotted as a function of perpendicular distance from the tower.

¹ Terrain extraction is based upon a 3 arc second point spacing terrain database.
