Re: Elwood Indiana Tower
Civil Designs job # 04-163

Dear Mr. Mattingly,

Civil Designs, LLP has determined the orientation of the antennae on the above referenced tower to be an azimuth of 60 degrees 49 minutes 08 seconds. The azimuth is based on geographic coordinates established using GPS equipment (WGS83 datum) and corrected to astronomic (true) north. The accuracy of this azimuth is plus or minus one half degree.

Please contact me if you have any questions.

Sincerely,

A handwritten signature in black ink, which appears to read "Brian L. Wood". The signature is fluid and cursive, with the first name being the most prominent.

Brian L. Wood, RLS
