

EXHIBIT 34
FCC Form 340
Section VII, Question 11

Purpose of Application & Explanation of Channel Use

This application is being filed to request a modified construction permit for KUEW-DT, St. George, Utah, to change the antenna and reduce the effective radiated power (ERP). The parameters in this application reflect the facilities that were actually constructed and that are described in the pending license application BLEDT-20010601AHH.

Because its original construction permit (BPET-19960705KK) was granted June 3, 1998, KUEW-DT was not allotted a paired DTV channel. On May 1, 2000, the permittee filed an application to modify its construction permit to specify DTV rather than analog facilities on Channel *18 and notified the FCC that it would construct its initial facilities as digital facilities on its NTSC channel. That construction permit (BPEDT-2000501AIJ), which was not granted until May 15, 2001, retained the original expiration date of June 1, 2001. As noted above, KUEW-DT was constructed within the allotted time and its Form 302-DTV license application was submitted June 1, 2001.
