RE: Tower for W236AP, Binghamton, NY

Dear FCC,

I have observed the tower used to mount the Scala CA2-CP antenna for FM translator station W236AP, Binghamton, NY. The tower is pre-existing, the tower is not base insulated, and the tower is not detuned at the AM frequency of WNBF(AM), 1290 kHz. The tower is a guyed, triangular radio tower, and is grounded at the base.

I certify that the above information is correct.

Sincerely,

A handwritten signature in black ink, appearing to read 'Kevin M. Fitzgerald', followed by a large asterisk or star symbol.
