

Distance Move Waiver Request

Licensee requests moving the station 6.6 km, 1 km over the distance of 5.6 km. Reason for this includes the dearth of available tower sites in the rural area, and the licensee would like to co-locate the facility at the studio location which would be within 50 meters of the proposed site. Such co-location would allow for convenient monitoring and access to the transmitter site and ease and economy of 24-hour operation and maintenance.

Second Adjacent Waiver Request

Second adjacent channel KXJM Banks, OR (298C0) has a signal strength conservatively assessed at 80 dBu at the proposed site. Using U/D methodology, this imparts a 21 meter interference area at a wattage of 9 watts ERP for a HAAT of 106 meters. The antenna is located on rural private property, imparting an interference area below of zero population. Thus, a waiver is requested for utilization of this second adjacent channel for LPFM.
