

EXHIBIT 12

Page #1, Waiver Request of Section 74.1204

K215CA, Ridgecrest, CA 4 Watts ERP

Calvary Chapel of Twin Falls, Inc. 04/02

The proposed site is contained entirely inside the service contours of second-adjacent Stations KFRJ, China Lake, CA and KWTD, Ridgecrest, CA

KFRJ.CP

The proposed site is contained entirely inside the service contour of second-adjacent Station KFRJ, Channel 216, Class B, 3 kW, China Lake, CA. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent station KFRJ arriving protected F(50,50) signal at the proposed transmitter site is 83-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KFRJ is 117-dBu (free-space contour method employed). This means that the 117-dBu interfering signal would, in the worst case, extend 20 meters from the center of radiation, which is proposed at 20 meters AGL and already exists at 18 meters AGL. A 7.5 Minute Topographical map is being submitted to show there are no buildings directly located within a few feet of this tower. Since no population inhabits this interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect second-adjacent channel station KFRJ.

KWTD.CP

The proposed site is contained entirely inside the service contour of second-adjacent Station KWTD, Channel 220, Class B, 7.5 kW, Ridgecrest, CA. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent station KWTD arriving protected F(50,50) signal at the proposed transmitter site is 87-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KWTD is 121-dBu (free-space contour method employed). This means that the 121-dBu interfering signal would, in the worst case, extend 13 meters from the center of radiation, which is proposed at 20 meters AGL and already exists at 18 meters AGL. A 7.5 Minute Topographical map is being submitted to show there are no buildings directly located within a few feet of this tower. Since no population inhabits this interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect second-adjacent channel station KWTD.
