

The applicant presently operates out-of-core TL K52FK, Eureka, California, at a location slightly south of Ferndale, California, and approximately 35 kilometers from Eureka. It is now proposed to relocate the facility to a site much nearer its city of license, at the same time changing to Channel 20z.

Although the distance of the relocation would be 37.3 kilometers, the provisions of 47 CFR 73.3572(a)(4)(ii) do not specify any distance limitations for these DTV/out-of-core displacements. And attention is directed to the fact that informal contact with Commission staff indicates that as long as the licensed service contour is wholly contained within the proposed, no showing of technical justification is required. The relative service contours are shown in attached Exhibit 6A.
