KHSL-FM

Capstar TX Limited Partnership

RADIO MULTIPLE OWNERSHIP ANALYSIS -- 11/17/2003

This statement and the attached figures were prepared on behalf of Capstar TX Limited Partnership ("CTLP"), a licensee subsidiary of Clear Channel Communications, Inc. CTLP proposes to modify the facilities of KHSL-FM. A multiple ownership analysis was prepared considering the following radio stations under present or proposed common ownership or time brokerage:

Table 1: Proposed Commonly Owned or Controlled Stations Studied

Call Sign	Facility ID#	City	State	Freq
KMXI	40843	CHICO	CA	95.1
KSTE	22883	RANCHO CORDOVA	CA	650
KPAY	22975	CHICO	CA	1290
KEWE	50710	OROVILLE	CA	1340
KHSL-FM	22974	PARADISE	CA	103.5

Since certain of these stations have overlapping principal community contours (5 mV/m for AM stations, 3.16 mV/m for FM stations), an ownership study has been prepared in accordance with the Federal Communications Commission's multiple ownership rules¹.

CTLP does not have an attributable interest in any other station with a principal community contour that overlaps or intersects the proposed facility of KHSL-FM.

Radio Markets

There is one "radio market" applicable to common ownership of the subject stations is defined as the area encompassed by the mutually overlapping principal community contours of the proposed commonly owned stations. These mutually overlapping contours form one "radio market" for analysis under the Commission's rules.

The Radio Market is shown in *Figure 1* and presented in tabular form below:

Call Sign	Facility_id	City	State	Freq
KMXI	40843	CHICO	CA	95.1
KSTE	22883	RANCHO CORDOVA	CA	650

¹ See 47 C.F.R. § 73.3555.

KPAY	22975	CHICO	CA	1290
KEWE	50710	OROVILLE	CA	1340
KHSL-FM	22974	PARADISE	CA	103.5

3-FM 2-FM

Count of Stations in Defined Market

The number of radio stations in a "radio market" is determined by counting the operating, commercial stations having principal community contours that overlap or intersect the principal community contours that define the radio market, plus the subject commonly owned or controlled stations.

In the Radio Market studied herein, there are at least 13 radio stations, including the subject co-owned stations that overlap or intersect with the defined "radio markets." *Table 1* is the tabulation of the radio stations identified in the markets and *Figure 2* is a map representing those stations contours. For simplicity of analysis only those stations that overlap or intersect station KMXI (FM) are listed.

Only known licensed, operating commercial stations were included in this tabulation. Distances to contours for AM stations were predicted using the antenna patterns as identified in the Commission's AM database and the appropriate Ground Wave Field Strength versus Distance Graph of 47 C.F.R. § 73.184. Ground conductivities were obtained from FCC Figure M3. Distances to the FM contours were determined based on the method of 47 C.F.R. § 73.313. Terrain data was derived from the N.G.D.C. 30 second computer database for each of the FM stations using radials spaced every 10 degrees of azimuth.

Based on the above, it is concluded that the proposed modification does comply with § 73.3555(a) of the FCC Rules.

Sincerely,

Troy G. Langham
FCC Engineering Specialist
Capstar TX Limited Partnership
