

SUPPLEMENTAL ENGINEERING STATEMENT  
Cram Communications, LLC.  
April, 2017

Cram Communications, LLC. (“CCL”) is the licensee of FM translator W206BH, Lyons Falls, NY and has a pending application (BMPFT-) on file to modify its construction permit (W253BZ).

With regard to second adjacent-channel considerations, FM translator W254CI, Camillus, NY has filed a minor change application (BPFT-20170407ACB) to modify its output channel to ch. 255 and relocate to the same tower (ASR 1007177) as W206BH (W253BZ). As both antennas are proposed to be on the same tower at 42 m. AG and 32 m. AG respectively, it is demonstrated as required by Section 73.1204(d) that there would be a lack of population whereby no interference would be caused to or received from either the existing or proposed authorization for W206BH or the proposed operation for W254CI.

The applicant will comply with Section 1.30003 regarding installation on an AM tower which is that of WOSW(AM), Fulton, NY.
