In evaluating the proposed change in location and decreased ERP for K18GF FID 130211, an outgoing interference study was executed at the existing tower location using the proposed changes as outlined in the application. The stations listed in the table below showed possible interference. When these stations were evaluated for outgoing interference using the OET-69 Longley Rice methodology, the interference, when rounded to the nearest whole percent, was found to be zero percent interference in each case.
