

ENGINEERING STATEMENT

Request for Special Temporary Authorization

prepared for

Gray Television Licensee, Inc.
WIFR-DT Freeport, IL
Facility ID 4689

Gray Television Licensee, Inc. (“*Gray*”) is the licensee of television station WIFR(TV), analog Channel 23 and digital Channel 41, Freeport, IL. This statement supports *Gray*’s request for Special Temporary Authority (“STA”) to temporarily operate the post-transition digital WIFR-DT facility on its pre-transition channel. This statement supplies interference analysis results as well as coverage and population data as specified in the Report and Order in the Third Periodic Review.¹

A construction permit (BPCDT-20080613AAB) authorizes WIFR-DT to operate its post-transition digital facility on Channel 23, its current analog channel. This channel was established in Appendix B of the Seventh Report and Order in MB Docket 87-278. Additionally, a *Notice of Proposed Rulemaking* has been issued² in MB Docket 08-135 which would change WIFR-DT’s post-transition channel to Channel 41, which is its pre-transition digital channel. Pending the outcome of Docket 08-135, *Gray* herein seeks an STA to permit continued use of its authorized pre-transition digital Channel 41 facility into the post-transition period.

The authorized pre-transition digital operation involves an effective radiated power (“ERP”) of 53 kW at 220 meters antenna height above average terrain (“HAAT”), with a nondirectional antenna. License application BLCDT-20050725AAL is pending for this facility, to cover the facilities authorized in construction permit BMPCDT-20050103AFQ. The proposed STA facility will operate with the currently authorized Channel 41 facility.

¹*Third Periodic Review of the Commission’s Rules and Policies Affecting the Conversion to Digital Television*, MB Docket No. 07-91, FCC 07-228, released December 31, 2007.

²*Amendment of Section 73.622(i), Final DTV Table of Allotments, Television Broadcast Stations (Freeport, Illinois)*, MB Docket 08-135, DA 08-1599, Released July 8, 2008.

A contour comparison map is supplied as **Figure 1**, showing the coverage contours associated with the authorized digital Channel 41 and licensed analog Channel 23 facilities. Population counts using OET Bulletin 69³ analysis for the transition period show that the licensed WIFR analog Channel 23 facility's service population is 736,857 persons and the authorized WIFR-DT Channel 41's service population is 892,932 persons. The proposed post-transition STA operation of WIFR-DT with its pre-transition facility on Channel 41 would serve 868,232 persons in the post-transition period. Despite no change in WIFR-DT technical parameters, the digital population decreases slightly from pre-transition levels since incoming interference levels are changed with the introduction of other nearby post-transition facilities. The proposed STA facility would continue to provide service to all areas that presently receive analog and digital service from WIFR, as shown on **Figure 1**.

A detailed interference study per OET Bulletin 69 shows that the proposal complies with the 0.5 percent limit of new interference caused to pertinent nearby post-transition stations and their Appendix B facilities. The interference study output report is provided as **Table 1**. Protection requirements towards authorized Class A stations are also satisfied.

The proposed STA operation complies with the FCC's limits concerning human exposure to RF energy. Based on OET-65 equation (10), and considering 25 percent antenna relative field in downward elevations (pattern data shows less than 25 percent relative field at angles 10 to 90 degrees below the antenna), the calculated signal density near the tower at two meters above ground level attributable to the proposed facility is $2.5 \mu\text{W/cm}^2$, which is 0.6 percent of the general population/uncontrolled maximum permitted exposure limit. This is below the five percent threshold limit described in §1.1307(b) regarding sites with multiple emitters, categorically excluding the applicant from responsibility for taking any corrective action in the areas where the proposal's contribution is less than five percent. The applicant will coordinate exposure procedures

³FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 ("OET-69"). The implementation of OET-69 for this study followed the guidelines of OET-69 as specified therein. A standard cell size of 2 km was employed. Comparisons of various results of this computer program (run on a Sun Sparc processor) to the Commission's implementation of OET-69 show excellent correlation.

Engineering Statement
Gray Television Licensee, Inc.
(page 3 of 3)

with all pertinent stations and will reduce power or cease operation as necessary to protect persons having access to the site, tower or antenna from RF electromagnetic field exposure in excess of FCC guidelines.

The undersigned hereby certifies that the foregoing statement and associated attachments were prepared by him or under his direction, and that they are true and correct to the best of his knowledge and belief.

A handwritten signature in blue ink that reads "Joseph M. Davis".
