

KBLM-LP ATTACHMENT 2, to minor change FCC from 346 filed May 29, 2002

**Environmental Considerations
KBLM-LP Minor Modification**

There will be no new physical tower construction associated with this application. The station is already located on the proposed tower. The tower is fully constructed and is registered. No increase in tower height is proposed.

Using the rough formula provided in the Commission's television license renewal instructions, based on an assumed worst case of 45 Kw ERP at 15 meters above ground, RF exposure at two meters above ground will be less than 2.5 percent of the FCC limit. As this number is less than the five percent, no further analysis is required.
