Section VII, Question 15
Exhibit 15

Technical Discussion

This Application was prepared by Serendipity Ventures II, LLC of Festus, Missouri in response to a request by the Applicant.

The software used for the engineering is RadioSoft™ as has been updated prior to this application preparation. The Preparer used good engineering practices and conservative estimates in the preparation of this application.

Population counts and area covered was derived from the software using the Census Bureau data for 2000. Any areas over water that were part of those calculations are a minimum area.

Any contour overlaps, contour protections and TV channel 6 protections are discussed in the following exhibits as attached.
