

## Human Exposure Level Showing

An FM Model showing of the exposure level from a 4bay 0.5 wave spaced antenna, shows a human exposure level at two meters above ground that is less than 20  $\mu\text{W}/\text{cm}^2$ , which is far below the required level. The calculations were made using the FCC's FM Model software.

There are no environmental issues, either human exposure or any others which come into play at the proposed site. Further, there is another broadcast tower with-in a quarter of a mile which is on the same mountain.
