

**EXHIBIT 1**  
(Section I, Question 4)

On behalf of WAGT, Inc., the permittee of WAGT-DT, Augusta, Georgia, this application seeks a minor modification to the recently granted digital construction permit for WAGT-DT. 1/ Specifically, it requests an increase in effective radiated power to 400 kW in order to better serve its home area.

Also, according to the instructions, no answer should be necessary with regard to Questions 2 – 10 in Section II (except for Question 4(a)). However, the electronic system requires some answer in order to file. Accordingly, we responded "yes" to each of these questions.

---

1/ The engineering exhibit largely was prepared prior to the receipt of the grant of the Station's initial permit. Accordingly, it states that this application is an amendment to the formerly pending application. In fact, the engineering statement supports what is now a minor modification application.
