

## The Educational Program of Texas Pelican Media

Our Mission is Threefold.

:

1) Promote education by broadcasting activities, programs and athletics of the local school district and local individual charter schools in our service areas.. Many local schools do not get the depth of coverage or daily reports which are so valuable to students and parents. The greatest educational purpose we can serve is to support local schools.

2) Establish a source for emergency and evacuation information on a local level, for residents of our service areas.

3) Provide exposure for local artists and musicians in the area..

Texas Pelican Media believes in the local community. In a former association, Mrs Doerner and Mr. Neely have successfully provided coverage of local academics and athletics on the Internet at Palmsradio.com . Specific Events have included coverage of graduation, school board meetings Honor roll recognition and athletics. With the ease of use of FM radio, Texas Pelican Media will expand upon the Palmsradio.Com legacy and provide even greater service to the residents of the local communities we serve.

Many smaller locales have unique needs with regards to local emergency notification. It is not uncommon for localized issues in a limited area to receive little or no notice by larger commercial outlets. Educational FM radio will be a definitive source of emergency information for the local communities we serve when life continues "As Usual" in nearby larger cities.

Texas Pelican Media stands ready to provide emergency response information to the citizens of our service areas in the event of a hurricane or natural disaster.

South Texas is home to a disproportionate number of talented Artists, songwriters and musicians. While lacking national recognition, these artists and many others are truly a part of the South Texas local culture. An Educational FM station provides a vehicle to showcase this local talent to our service areas.

We believe in basically volunteer staffed local radio and have a history of establishing this type of structure in other media in the past. Educational FM radio allows even wider reach and coverage and clearly would be in the public interest.
