

**Exhibit #10-3:  
Supervising Engineer Affidavit**

Alan F. Kilgore supervised the WBHY-FM antenna installation authorized by FCC Permit File Number BMPED-20171031ACT as consultant to Goforth Media, Inc. (licensee).

He instructed the Chief Engineer (William Brad Arnold) and construction crew chief (Rick Estes), stressing the importance to be aware of the critical installation and proper alignment and orientation of parts necessary to achieve the desired outcome. This included coordinating with the manufacturer to confirm parasitic element positions and discussing such details with the crew chief throughout the installation process, including how to confirm such alignment. He also operated the VNA when guiding tower personnel for adjustments of the antenna's fine-match tuning section for optimizing the Return-Loss match of the installed antenna system.

All printed manufacturer's installation instructions and recommendations were understood and followed by installation personnel. The Supervising Engineer also reviewed pictures of the installation taken by tower personnel and videos taken by a drone operator.

The mounting brackets for each antenna bay mounts on two legs of the SE face of the tower which is oriented to 110 degrees True. The manufacturer references the position of the bays to that particular tower face in the instructions (see page 1 of "Exhibit#10-1 - Antenna Proof of Performance") and drawing 1777-002 (see page 4 of "Exhibit #10-1 - Antenna Proof of Performance"). The correct azimuth is confirmed by Matthew Orrell of Poly Surveying (see Exhibit #10-2 - Surveyor Map and Certification).

To my knowledge all of the necessary requirements of the permit were met.

The person supervising the project is the consulting Broadcast Engineer responsible for coordinating the installation of this facility, who obtained a certification of "Senior Radio Engineer" from the Society of Broadcast Engineers (SBE) in 2000, holds a certification of "Professional Broadcast Engineer" from SBE since 2005, has held FCC General Radiotelephone License PG-6-18888 since 1974 and has held Amateur Radio License WB4THU since 1971.
