

ENGINEERING STATEMENT

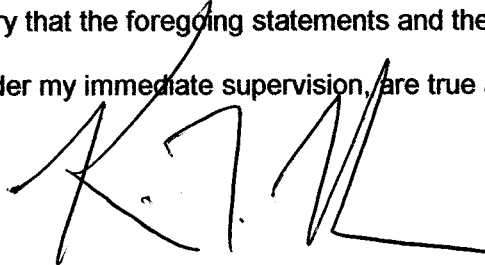

The engineering data contained herein have been prepared on behalf of FOX TELEVISION STATIONS, INC., licensee of KTTV-DT, Channel 65 in Los Angeles, California, in support of its Application for Construction Permit to operate a post-transition auxiliary facility on Channel 11, its allotment channel.

It is proposed to utilize the existing Dielectric Channel 11 directional auxiliary antenna mounted at the 68-meter level of the existing 76-meter tower. Exhibit B provides azimuth and elevation pattern data for the licensed antenna. Exhibit C is a map upon which the predicted service contours of the recently authorized post-transition KTTV-DT facility and the proposed auxiliary facility are plotted. As shown, the auxiliary's 36 dBu contour is completely contained within that authorized to post-transition KTTV-DT. As a result, and since this proposal is for an auxiliary facility, an interference study is not provided. A power density calculation appears in Exhibit D.

It is not expected that the proposed facility would cause objectionable interference to any other broadcast or non-broadcast station authorized to operate at or near the KTTV-DT site. However, if such should occur, the owner of this station recognizes its obligation to take whatever corrective actions are necessary.

Since no change in overall height or location of the existing tower is proposed herein, the FAA has not been notified of this application. In addition, the FCC issued Antenna Structure Registration Number 1012221 to this tower.

I declare under penalty of perjury that the foregoing statements and the attached exhibits, which were prepared by me or under my immediate supervision, are true and correct to the best of my knowledge and belief.

KEVIN T. FISHER
