

TECHNICAL EXHIBIT
MINOR CHANGE APPLICATION
NEW TV STATION (FACILITY ID 84214)
SENATOBIA, MISSISSIPPI
CH 34 19.8 KW 169 M

Technical Narrative

This Technical Exhibit supports a minor change application for construction permit for a New unbuilt television station at Senatobia, Mississippi. The New station is authorized on analog channel 34 with a non-directional antenna maximum effective radiated power (ERP) of 1100 kilowatts (kW) and an antenna height above average terrain (HAAT) of 169 meters (BPET-19961001KI).

Proposed Facilities

The New station desires to “flash-cut” to digital mode on the current channel 34. Digital operation is proposed with a non-directional antenna, along with a maximum ERP of 19.8 kW and an antenna HAAT of 169 meters. The proposed site coordinates are (NAD27): 34-51-05 N, 90-00-19 W. The antenna structure registration number (ASRN) is 1045210.

Figure 2 is a map indicating that the proposed City-Grade contour will encompass all of the city limits of Senatobia (derived from 2000 U.S. Census information for Mississippi).

Pre-Transition Allocation Considerations

The proposed operation meets the FCC's interference standards to pertinent analog (NTSC) and DTV assignments using the procedures outlined in the FCC's OET-69 Bulletin and a 2 kilometer grid cell size as shown by the analysis provided in Figure 3. The proposed operation complies with the FCC's "de minimis" interference policy with respect to pertinent Class A TV assignments.

The proposed operation complies with the current Freeze on contour extension, as it will not extend coverage beyond the currently authorized Grade B contour (see Figure 2).

Post-Transition Allocation Considerations

The proposed operation meets the FCC's interference standards to pertinent DTV Appendix B allotments using the procedures outlined in the FCC's OET-69 Bulletin and a 2 kilometer grid cell size as shown by the analysis provided in Figure 4.

Population Served

The herein proposed facility is predicted to serve 1,155,453 persons, post-transition based upon the 2000 Census.

Radiofrequency Electromagnetic Field Exposure

The proposed facilities were evaluated in terms of potential radio frequency (RF) energy exposure at ground level to workers and the general public. The radiation center for the proposed antenna is located 168 meters above ground level with a maximum ERP of 19.8 kW. A "worst case" relative field value of 0.8 was assumed for the downward antenna radiation calculation (see Appendix). The calculated power density at a point 2 meters above ground level will not exceed 0.0154 mW/cm². This is less than 5% of the FCC's recommended limit of 0.395 mW/cm² for channel 34 for an "uncontrolled" environment.

du Treil, Lundin & Rackley, Inc.

Consulting Engineers

Page 3

Senatobia, Mississippi

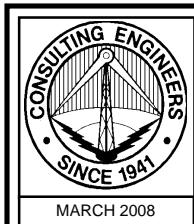

Access to the transmitting site will be restricted and appropriately marked with warning signs. As this will be a multi-user site an agreement between the stations will control access. In the event that workers or other authorized personnel enter restricted areas or climb the tower, appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure monitors or scheduling work when the stations are at reduced power or shut down.

It is noted that this statement only addresses the potential for radiofrequency electromagnetic field exposure. All other aspects of the environmental processing analysis will be or already have been provided to the FCC by the tower owner.
