

EXHIBIT 11

This narrative exhibit is submitted to demonstrate that the instant proposal fully complies with the interference criteria set forth in Section 74.1204 of the Commission's rules.

Attached at exhibit 12 are a spacing study and maps demonstrating clearly that there is no prohibited overlap between this proposal and any other FM services. The attached FM spacing study demonstrates that this proposal would be fully spaced even as a full power Class A FM station to all but two other FM facilities. It first should be noted that the new Vacant Allotment at Susquehanna, PA on Channel 227 does not require any spacing or protection as it is a new unbuilt and unapplied for allotment. The attached maps demonstrate that there is no prohibited contour overlap between WVBR-FM and the instant proposed FM translator facilities. Two FM translators have also been included on the maps because of their proximity to the proposed facilities. As demonstrated in these maps no prohibited overlap with these stations is predicted.

The three facilities that have been included on the attached maps are: WVBR-FM, 93.5, Ithaca, NY (60 dBu contour to proposed 40 dBu interfering contour); W227AB, 93.3, Endicott, NY (60 dBu contour to prop. 54 dBu int. contour); and W229AR, 93.7, Waverly, NY (60 dBu contour to prop. 54 dBu int. contour). A scale of kilometers has been included on the maps. These maps were drawn to scale using the rfSoftware series of computer programs.
