ENGINEERING STATEMENT
MEREDITH CORPORATION
MODIFICATION OF BLTT19920323JL
TELEVISION TRANSLATOR STATION W57BG
CANTON/WAYNESVILLE, NORTH CAROLINA
CH 47, 5.0KW-D, 463 MTR. HAAT

This statement supports an application by Meredith Corporation licensee of W57BG a television translator station licensed to serve Canton/Waynesville, North Carolina.

The applicant is proposing to “flash-cut” the operation of W57BG from analog to digital.

Additionally, W57BG is currently an analog facility operating on channel 57, a channel designated as “out-of-core.” Concurrent with this application the applicant is seeking a displacement channel to move digital transmissions “in-core” to channel 47 simultaneous with the “flash-cut.” At “flash-cut” channel 57 operations will cease and the channel will be surrendered.

No change is being proposed to the make or model of the antenna or to the height of radiation center currently authorized. Selection of digital ERP was chosen to provide, at minimum, replication of the current analog facility. An analysis was performed using the methodology stated in OET-69 using same software (tv_process_dlptv_pt) utilized by the Commission for analyzing interference into current users and pending applicants and, therefore, should yield similar results. The results of that analysis indicate the proposed facility is in compliance with 47 C.F.R. Sections 74.709, 74.793(e), 74.793(g), 74.793(h), 74.794(b) and 73.1030.
