

EXHIBIT 12
Page #1, Waiver Request of Section 74.1204
Granger, WA New-T 62 Watts ERP
Calvary Chapel of Twin Falls, Inc. 7/03

The proposed site is contained entirely inside the service contour of second-adjacent station KXDD, Yakima, WA

KXDD

The proposed site is contained entirely inside the service contour of second-adjacent Station KXDD, Channel 281, Class C1, 100kW, Yakima, WA. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent KXDD arriving protected F(50,50) signal at the proposed transmitter site is 79-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KXDD is 119-dBu (free-space contour method employed). This means that the 119-dBu interfering signal would, in the worst case at the maximum radial, extend 63 meters, or .063km from the base of the tower. A 7.5 Min Topo Map is included with this Exhibit to show that this tower is not in an area of population and there are no businesses or residences located within the interference contour. Since no population inhabits this 120-dBu interfering area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station KXDD.
