

TECHNICAL STATEMENT
NEW(FM) TRANSLATOR
FCC FORM 349
GOLDEN, COLORADO, CH. 268D
MARY MEDICUS
APRIL 2013

This FCC amended short form 349 application is being submitted in response to DA 13-427 released March 14, 2013 regarding Preclusion Showings, Tech Box proposals within Spectrum Limited Markets and/or within 39 km of Spectrum Limited Market Grids for new Auction 83 FM translator stations. This application is response to an original application filed by Mary Medicus, BNPFT-20030314BOM, facility ID 147935, for a new FM translator for Golden, Colorado on channel 270D. This application is listed in "Attachment A" of DA 13-427.

The applicant does seek to make a minor amendment to the original application by specifying to "one step" channel change from the original channel of 270D to 268D. It will also increase its antenna height from 2244 meters to 2251 Meters Above Mean Sea Level. It will remain at the originally proposed transmitter site. It will also decrease its effective radiated power from 0.01 kilowatts (10 watts) to 0.002 kilowatts (2 watts) and modify its proposed directional antenna system.

This application proposes service on channel 268D (101.5 Mhz) from an existing non-registered tower located at the NAD 27 coordinates of N 39° 43' 46", W 105° 14' 08". The existing tower has an overall height of 9.1 meters. The proposed antenna will be a Scala CA-5/CP, one yagi type, directional antenna, mounted at the 9 meters above ground center of radiation, and 2251 meters height above mean sea level. An effective radiated power of 0.002 kilowatts (2 watts), both horizontal and vertical polarization will be utilized.

Figure 1 is a detailed channel interference study conducted at the proposed site. As can be seen, there will not be any outgoing prohibited overlap with any other stations on Co-channel or pertinent adjacent channels, with the exception of 2nd adjacent channel stations KOSI(FM) Denver, CO, operating on channel 266C, facility ID 67844 and KXWA(FM) Centennial, CO, operating on channel 270C3, facility ID 70822.

The proposed operation on 268D is located within the protected 60 dB μ contour of 2nd adjacent channel of KOSI (ch. 266C) and KXWA (ch. 270C3). Figure 2 shows that KXWA produces a field strength of 66.4 dB μ at the proposed site. Therefore, the respective worst case predicted interfering contour F(50-10) generated by the proposed translator on channel 268D is an additional 40 dB μ or 106.4 dB μ . Figure 3 shows that KOSI produces a field strength of 138.7 dB μ at the proposed site. Therefore, the respective worst case predicted interference contour F(50-10) generated by the proposed translator on channel 268D is an additional 40 dB μ or 178.7 dB μ . Since this interference contour would be a much smaller coverage area than the inference contour for KXWA, only the KXWA interference contour was studied further.

Figure 4 shows the coverage area for the 106.4 dB μ interference contour F(50-10) and shows that there is no population in the area of interference. The 106.4 dB μ interference contour would only extend 0.048 kilometers (48 meters) in the maximum lobe areas of the directional antenna. Figure 5 is a USGS 7.5 minute map showing the area around the proposed site. Figure 6 is a Satellite view map of the area located around the proposed site and the proposed limits of the 106.4 dB μ contour which shows there are no homes or roads within this contour area. Figure 7 is a site photo of the proposed tower site and proposed supporting mast. The applicant, Mary Medicus, respectfully requests a waiver of C.F.R. 74.1204(d) of the Commission's rules based on the fact that there is no population within the area of predicted interference. There are no homes

nearby the proposed existing tower site, which is a privately owned with private access. The transmitter building is uninhabited and does not have indoor plumbing. Should any unforeseen actual interference be caused, the licensee will immediately cease broadcasting with new translator at Golden, Colorado until such interference can be eliminated.

Figure 9 is a tabulation, for the standard translator 12 radials, with additional radials, average heights above average terrain for each radial and the distances to pertinent contours for the proposed operation on channel 268D.

Figure 8 is a polar plot with data of the proposed directional antenna system.

This application will not overlap with any other proposed FM translator applications submitted in "Auction 83".

It was determined that this form 349 FM translator application will comply with all of the technical requirements under part C.F.R. 74 of the Commission's rules and regulation.
