**Second-Adjacent Waiver Request**

**Statesville, NC**

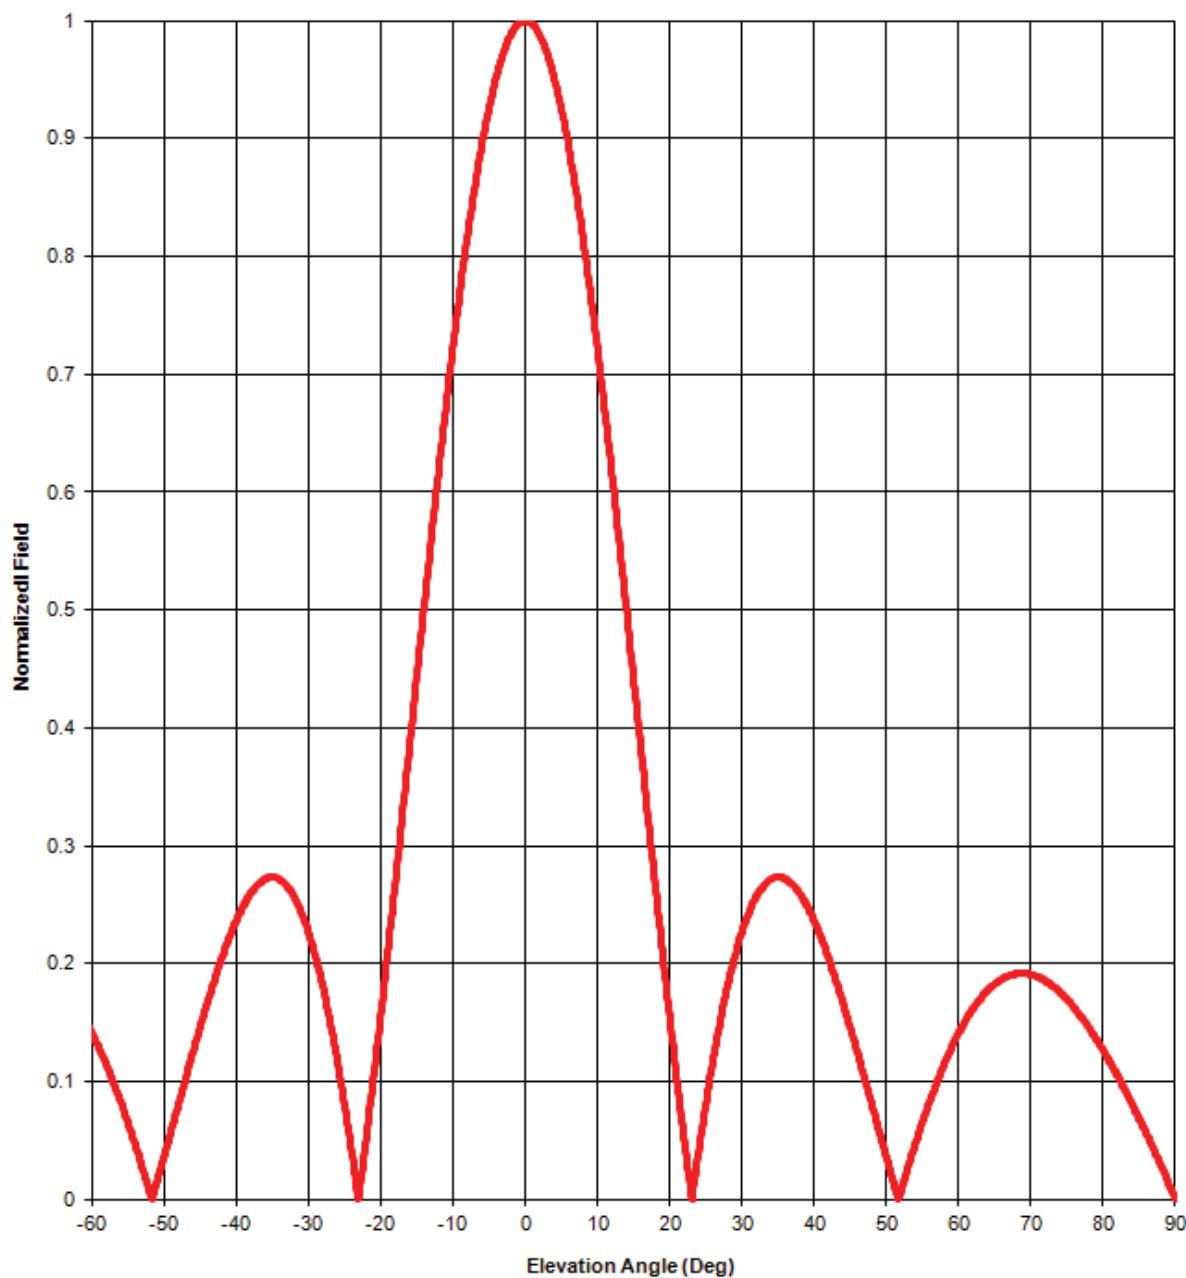

The proposed LPFM station will broadcast on channel 273, which is within the 73 kilometers, second-adjacent minimum distance separation of station WLKO on channel 275. The WLKO interfering contour at the LPFM tower site is 70.4 dB $\mu$  F(50,50). Using the ratio of 100:1 (LPFM to WLKO) on the second-adjacent channel, the population within the proposed LPFM 110.4 dB $\mu$  contour is zero. Applying the antenna manufacturer's vertical radiation pattern the area of interference can be more accurately calculated geometrically, rather than just by using the free space equation alone. This particular antenna is a three bay full-wave spaced Shively 6812b antenna. It was determined from the manufacturer's vertical plan that at 70 degrees below horizontal the interference area would extend 26.3 meters toward the ground. The antenna radiation center 28 meters above ground, thus the interference area will never reach the ground. There are no occupied structures or elevated roadways within the interference area of the LPFM. Therefore, the application is in compliance with §73.807(e)(1) *Waiver of the second-adjacent channel separations.*

## Exhibit 11 Figure 1

### Minimum Ground Clearance

Depression Angle Below Horizontal	Antenna Relative Field	ERP (Watts)	Distance to interfering Contour from Antenna (m)	Horizontal Distance of Interfering contour from tower (m)	Vertical Clearance of Interfering contour above TGL (m)
