**TECHNICAL STATEMENT**

This Technical Statement was prepared on behalf of Commonwealth Broadcasting, LLC (“CBL”), licensee of radio station WNRJ, Channel 291A, Poquoson, Virginia. CBL herein requests that the licence for WNRJ be modified due to the recent replacement of one non-directional antenna system with another non-directional antenna system. In addition, the transmission line feeding the antenna system was also partially replaced. A calculation of the transmitter power output of WNRJ is attached as Exhibit A. This proposed modification complies with §73.1690(c)(1) of the rules.

The WNRJ antenna system is mounted on one of four towers associated with AM station WNIS, 790 kHz, Norfolk, Virginia. Principals of CBL have controlling interest in the licensee of WNIS; thus, the stations are effectively co-owned. Prior to and following the installation of the replacement non-directional antenna for WNRJ, the WNIS system was checked. Based on the initial post-construction review, the installation of the antenna had a minor impact on the operating parameters. Therefore, the licensee is submitting a request for STA to operate WNIS with parameters at variance and maintenance of monitor points. Once the system is restored, a partial proof of performance will be conducted, and the results will be submitted to the

Commission with a request to return WNIS to the direct measurement of power. The licensee of WNIS will assume all responsibility for the on-going issues impacting WNIS.

Based on the foregoing, this proposal is believed to be in compliance with the Commission's rules and regulations.
