**ENGINEERING REPORT**

---

**Summerland, CA, Channel 274D FM Translator Application**

**EXHIBIT 1: LPFM PRECLUSION STUDY**

Gold Coast Broadcasting, LLC ("Applicant") submits this technical minor amendment for its pending 2003 application for a new FM translator station at Summerland, CA. The pending application file number is BNPFT-20030317HDD.

The corresponding amendment includes a channel displacement from 273 to 274. This Exhibit 1 addresses only the LPFM Preclusion Study requirements of the technical amendment. (The other technical requirements of this amendment are address in a separate document of this on-line filing.)

**LPFM PRECLUSION STUDY RESULTS**

This Engineering Report demonstrates that this application meet the FCC's requirements for this Auction 83 FM translator pursuant to *Creation of a Low Power FM Service, Amendment of Service Rules and Eligibility Rules for FM Broadcast Translator Stations*, Fifth Order on Reconsideration and Sixth Report and Order, FCC 12-144 (re;. December 4, 2012) ("Fifth Order on Reconsideration"). Additionally, the FCC's LPFM spectrum availability program, [http://www.fcc.gov/Bureaus/MB/Databases/source\\_code/lpfm6.20121206.zip](http://www.fcc.gov/Bureaus/MB/Databases/source_code/lpfm6.20121206.zip) ("LPFM6"), is used as support for this Engineering Report.

An LPFM Preclusion Study is required by this application (based on the location of the herein proposed transmitter site) to each of the following *Spectrum Limited* Arbitron Metro Markets:

Oxnard-Ventura ("Oxnard"), CA –

Mrkt # 119; 20 min. grid centered at N 34-11-51 W 119-10-34 (d,m,s; NAD 27);

Santa Barbara, CA –

Mrkt # 218; 20 min. grid centered at N 34-25-24 W 119-42-12 (d,m,s; NAD 27).

Note that there are no *Spectrum Available* Metro Markets located within 39 kilometers of the proposed transmitter site.

## *Metro Area Preclusion Study Results*

### Oxnard Spectrum Limited Metro Market

Figure 1, attached, is the LPFM6 output file for the Oxnard Metro Market with the study centered at the grid center.

From Figure 1 it is shown that zero channels are available within the 20-minute Grid for future LPFM on the same or upper first adjacent channel of the herein proposed FM translator (channels 274 and 275).

From Figure 1 it is also shown that zero channels are available within 15 kilometers of the proposed transmitter site for future LPFM on the lower first-adjacent channel (273). (Pursuant to Section 73.807c, since the proposed 60 dBu F50,50 service contour extends only 7.1 kilometers at its greatest distance, the spacing requirement from a future first adjacent-channel LPFM must be separated by 15 km.) The nearest available LPFM channel/point for channel 273 is at N 34-19-51 W 119-20-34 and is located 18.3 km from the proposed transmitter site.

As required by the Fifth Order on Reconsideration, this FM translator will not preclude the future use of a LPFM application from a potential LPFM channel/point located within the 20-minute Oxnard Grid.

### Santa Barbara Spectrum Limited Metro Market

Figure 2, attached, is the LPFM6 output file for the Santa Barbara Metro Market with the study centered at the grid center.

From Figure 2 it is shown that zero channels are available within the 20-minute Grid for future LPFM on the same or first adjacent channels of the herein proposed FM translator (channels 273, 274 and 275).

As required by the Fifth Order on Reconsideration, this FM translator will not preclude the future use of a LPFM application from a potential LPFM channel/point located within the 20-minute Santa Barbara Grid.

## *Transmitter Site Test Study Results*

This study proposes a site that is not located within a Top-50 Spectrum Limited Market and is generally not required. A *Transmitter Site Test* was made out of an abundance of caution and is submitted below showing that the study passes the test.

Figure 3, attached, is the complete LPFM6 output file for a study centered at the herein proposed translator site. From this site, the center location is shown to be available for future LPFM on channels 222, 223, 227, 231, 238, 242, 246, 250, 262, 266, 267, 281, 282, 286 and 294. Therefore, since at least one channel exists for future LPFM at the proposed transmitter site, the transmitter site test for this application is successfully passed.

The diagram shows a 10x10 grid. The horizontal axis is labeled with numbers 1 through 10 at the bottom. The vertical axis is labeled with numbers 1 through 10 on the left. A staircase pattern of horizontal dashed lines is drawn, starting from the top-left corner and moving towards the bottom-right. The lines are positioned at the following grid intersections: (1,10), (2,9), (3,8), (4,7), (5,6), (6,5), (7,4), (8,3), (9,2), and (10,1). A small circle is located at the intersection of the 5th vertical line and the 5th horizontal line from the bottom-left.

The diagram shows a rectangular box defined by dashed lines. The top and bottom edges are horizontal, while the left and right edges are vertical. At the top-left corner of the box, there is a small circle. The box is empty except for this circle.
