

## **Special Condition 2**

This proposal utilizes the same antenna, transmission line, and isolation network as the presently licensed K265DV. No changes were made to the K265DV antenna system above the base insulator of the tower. This proposal only adds a combiner system to use K230CH on the existing K265DV antenna system. K265DV was constructed on the KTON tower 3 at the time KTON was constructed. A complete proof of performance was done on KTON at that time with this antenna, transmission line, and isolation system. No further measurements are required.

See BL-20130620ABZ and BLFT-20140130ABV.
