Re: Capstar TX LLC (Capstar)
WAEB(AM), Allentown, Pennsylvania
Facility Identification Number: 14371
Special Temporary Authority (STA)
BESTA-20151106ERT

Dear Mr. Davis:

This is in reference to the request filed on November 6, 2015. Capstar requests a further extension of the STA originally granted on May 16, 2008, to operate with emergency antenna facilities pursuant to Section 73.1680 to complete repairs.¹ In support of the request, Capstar states that in the past five months, an FCC Form 302 application was not filed to update all operating parameters due to the availability of qualified personnel.

Requests for extension of STA will be granted only where the licensee can show that one or more of the following criteria have been met:

- Restoration of licensed facilities is complete and testing is underway;
- Substantial progress has been made during the most recent STA period toward restoration of licensed operation; or
- No progress has been made during the most recent STA period for reasons clearly beyond the licensee's control, and the licensee has taken all possible steps to expeditiously resolve the problem.

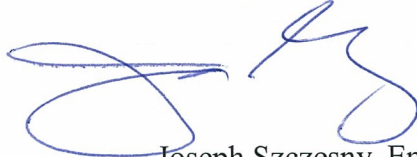

Accordingly, the request for extension of STA IS HEREBY GRANTED and station WAEB(AM) may continue to operate with parameters at variance from licensed values and/or reduced power while maintaining monitor points within licensed limits, to complete measurements and readjustment of the array to Moment Method derived parameters. Operation at night with an emergency ND antenna and reduced power not to exceed 0.375 kilowatt is also authorized, only as necessary to facilitate the repair work. Once the facility is operating day and night with the Moment

¹ WAEB is licensed for DA operation on 790 kHz with 3.6 kW day and 1.5 kW night.

Method derived substantially adjusted daytime and nighttime parameters, the parameters must be kept within 5% current ratio and 3° phase of the Moment Method derived parameters. It will be necessary to further reduce power or cease operation if complaints of interference are received. Capstar must use whatever means are necessary to protect workers and the public from exposure to radio frequency radiation in excess of the Commission's exposure guidelines. *See* 47 CFR § 1.1310. We recommend that Capstar complete all work and file an FCC Form 302 application in the near future in order to obtain a new license before the expiration date shown.

This authority expires on **May 4, 2016**.

Sincerely,

A handwritten signature in blue ink, consisting of a large, stylized 'J' followed by a series of loops and a final flourish.
