

KUDE(FM)
Nephi, UT
Proposed Minor Modification
Of Licensed Facility

Application Overview:

KUDE(FM) (FCC Facility ID# 72769) proposes a one-step upgrade from Channel 256A to Channel 256C1 and modify its currently Licensed Facilities using the following parameters:

Tech Box:

Channel:	256
Class:	C1
Antenna Coordinates:	N39-43-58.2, W111-56-34.6 (NAD 27)
Allotment Ref. Coordinates:	N39-39-09, W111-51-23 (NAD 27)
ASRN:	1210829
Tower Height AGL:	137.8 m
COR AMSL:	2050 m
COR AGL:	121 m
COR HAAT:	297 m
ERP:	100 kW
Directional Antenna:	No

Allotment Modifications:

Exhibit 1 is an allotment reference site channel spacings study for KUDE(FM) on Channel 256C1 at Nephi, UT, demonstrating that a one-step allotment site exists that is fully

spaced pursuant to Section 73.207 towards all other authorizations, allotments, and proposals from the following location:

Allotment Reference Coordinates: N39-39-09, W111-51-23 (NAD 27)

Allotment Site City-Grade Coverage:

In accordance with the city grade coverage requirements of Section 73.315, Exhibit 2 demonstrates that the proposed allotment site provides requisite coverage of KUDE(FM)'s community of license – Nephi, UT. As can be seen in the Exhibit, 100% of Nephi's community boundaries are encompassed by 70 dBu community contour. Also, no terrain obstructions are located between the antenna site and the community.

Suitable Allotment Reference Site:

In accordance with Note 1 to Section 73.3573, the allotment reference site is located at a suitable location and is not offshore, in a national or state park, on an airport or otherwise in an area which would necessarily present a hazard to air navigation. It is located at a constructed tower site assigned ASRN #1059001.

Antenna Site City-Grade Coverage:

Exhibit 4 demonstrates that the proposed facility's antenna site provides city grade coverage of KUDE(FM)'s community of license – Nephi, UT. As can be seen in the Exhibit, 100% of Nephi's community boundaries are encompassed by the F(50,50) 70 dBu contour of the proposed facility. Also, no major terrain obstructions are located between the antenna site and the community.

Interference Study (Requesting Section 73.215 Contour Protection):

Exhibit 5 is a channel spacings study from the proposed KUDE(FM) antenna site. It notes that the proposed KUDE(FM) antenna site would otherwise be slightly shortspaced to:

-KJMY(FM) Bountiful, UT 258C (see BLH-19880311KC)

-KBEE(FM) Salt Lake City, UT on 254C (see BMLH-20100723AVI)

Therefore, the applicant requests Section 73.215 contour protection processing.

KUDE(FM) is eligible to request 73.215 Contour Protection towards KJMY(FM) as it complies with the minimum separation requirements on its second adjacent channel at its proposed antenna site. The channel spacings study in Exhibit 5 shows that the proposed KUDE(FM) 256C1 antenna location is spaced 98.91 kilometers from the KJMY(FM) site. In order to be eligible for 73.215 Contour Protection, the minimum “C1 to C” spacing for second adjacent channel stations must be at least 98.5 kilometers. The proposed KUDE(FM) 256C1 antenna site satisfies this requirement by 0.41 kilometers.

Using the facilities proposed herein, KUDE(FM) 256C1 complies with the contour protection requirements of Section 73.215 towards KJMY(FM). The attached overlap tabulation studies and overlap map in Exhibit 5A demonstrates that this application complies with the contour protection requirements of Section 73.215.

In reviewing the attached studies, it should be noted that since KJMY(FM) does not utilize maximum Class C facilities, the following overlap studies were conducted assuming “Maximized” Class C Facilities for KJMY(FM) (100 kW at an HAAT of 600 meters).

Using the KUDE(FM) 256C1 technical parameters proposed in this application, Exhibit 5A demonstrates that the proposed KUDE(FM) F(50,50) 60 dBu Protected Contour does not overlap the F(50,10) 100 dBu Interfering Contour of KJMY(FM) operations on Channel 258C. Likewise, Exhibit 5A demonstrates that the F(50,50) 60 dBu Protected Contour for KJMY(FM) does not overlap the proposed F(50,10) 100 dBu Interfering Contour of the instant KUDE(FM) application on 256C1. Therefore, it appears as though the instant application meets the requirements of Section 73.215 towards KJMY(FM).

KUDE(FM) is eligible to request 73.215 Contour Protection towards KBEE(FM) as it complies with the minimum separation requirements on its second adjacent channel at its proposed antenna site. The channel spacings study in Exhibit 5 shows that the proposed KUDE(FM) antenna location is spaced 98.94 kilometers from the KBEE(FM) site. In order to be eligible for 73.215 Contour Protection, the minimum “C1 to C” spacing for second adjacent channel stations must be at least 98.5 kilometers. The proposed KUDE(FM) antenna site satisfies this requirement by 0.44 kilometers.

Using the facilities proposed herein, KUDE(FM) complies with the contour protection requirements of Section 73.215 towards KBEE(FM). The attached overlap tabulation studies and overlap map in Exhibit 5B demonstrates that this application complies with the contour protection requirements of Section 73.215.

In reviewing the attached studies, it should be noted that since KBEE(FM) does not utilize Class C maximum class facilities, the following overlap studies were conducted assuming “Maximized” Class C Facilities for KBEE(FM) (100 kW at an HAAT of 600 meters).

Using the KUDE(FM) technical parameters proposed in this application, Exhibit 5B demonstrates that the proposed KUDE(FM) F(50,50) 60 dBu Protected Contour does not overlap the F(50,10) 100 dBu Interfering Contour of KBEE(FM) operations on Channel 254C. Likewise, Exhibit 5B demonstrates that the F(50,50) 60 dBu Protected Contour for KBEE(FM) does not overlap the proposed F(50,10) 100 dBu Interfering Contour of the instant KUDE(FM) application on 256C1. Therefore, it appears as though the instant application meets the requirements of Section 73.215 towards KBEE(FM).

Downward Radiation Study (FM Model):

The proposed FM Facility has been evaluated in terms of potential radiofrequency electromagnetic field exposure at ground level in accordance with OET Bulletin No. 65, Evaluating Compliance with FCC Specified Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields (OET Bulletin 65, Second Edition 97-01, August, 1997). The Commission’s FM Model Power Density Prediction program was employed to determine the Field. Using the EPA Type 3: Opposed U Dipole antenna with 10 sections and 1 wavelength spacing, and the AGL height and ERP proposed in this application, the highest predicted power density 2 meters above ground is less than 12.2% of the Uncontrolled Standard with a Power Density of 24.3 microwatts per square centimeter 28.8 meters from the base of the tower.

Even though the site will fully comply with the Uncontrolled Site Standards, access to the transmitting site will be restricted and appropriately marked with warning signs. When it becomes necessary for workers to ascend the tower, appropriate measures, such as reduction or shut down of power if necessary, shall be taken to ensure that the human exposure to radiofrequency radiation will not exceed the FCC guidelines.

Existing Tower:

The proposed facility is exempt from environmental processing because the facility is not located at a location specified in Section 1.1307(a)(1)-(8) of the Commission's Rules and since the tower in question already exists.
