WWCJ and WNJZ are both second adjacent to the proposed facility. The weaker, and thus more fragile is WNJZ at 71.96 dBu at the proposed site. The attached spreadsheet shows that the interfering contour from the proposed facility does not reach the ground when the specified antenna is used. The attached aerial and streetview photos show that no tall buildings are near the site. Thus no population will be exposed to interference, and the conventional no-population waiver is appropriate.

All six TV6 facilities are fully contour protected as shown in the attached maps.
