

EXHIBIT A

ENGINEERING STATEMENT

The engineering data contained herein have been prepared on behalf of EBC ATLANTA, INC., licensee of Class-A Low-Power Television Station WYGA-CA, Channel 55, Atlanta, Georgia, in support of this Application for Construction Permit to specify operation of a digital companion low-power television station on Channel 16 as specified in BSFDTL-20060630BZD.

It is proposed to mount an SWR directional antenna at the 280-meter level of an existing 329-meter communications tower. Exhibit B is a map upon which the predicted service contours are plotted. It is important to note that the newly proposed 51 dBu contour encompasses a portion of the 74 dBu contour which obtains from the licensed facility. Operating parameters for the proposed facility are tabulated in Exhibit C. An interference study is provided in Exhibit D, and a power density calculation follows as Exhibit E.

Because no change in the overall height or location of the existing tower is proposed, the FAA has not been notified of this application. In addition, the FCC issued Antenna Structure Registration Number 1206253 to this tower.

I declare under penalty of perjury that the foregoing statements and the attached exhibits, which were prepared by me, are true and correct to the best of my knowledge and belief.

JEFFREY S. FISHER
