

TECHNICAL EXHIBIT
APPLICATION FOR MODIFICATION OF
DTV CONSTRUCTION PERMIT
STATION KRSC-DT
CLAREMORE, OKLAHOMA
CH 36 144 KW (MAX-DA) 455 M

Technical Narrative

This Technical Exhibit supports an application for digital television (DTV) station KRSC-DT which is paired with NTSC (analog) channel 35 at Claremore, Oklahoma. This application requests a modification of its construction permit (CP) for a digital television operation on channel 36 at Claremore.¹

Proposed Facilities

KRSC-DT is proposing to install a common TFU-29ETT-R S220 DC antenna system, manufactured by Dielectric, for both its DTV and NTSC operation. No change in transmitter site location is proposed. The proposed KRSC-DT effective radiated power exceeds the Commission's allocated maximum effective radiated power. Therefore, an allocation study was completed to ensure no prohibited interference would occur. It is also noted that the herein proposed noise-limited coverage contour does not exceed the presently authorized noise-limited contour.

¹ The current KRSC-DT construction permit file number is BMPEDT-20021118ABU.

The proposed DTV transmitter site will be located on the existing KRSC-TV tower located at:

36° 24' 03" North Latitude
95° 36' 30" West Longitude

A map of the transmitter site is provided in Figure 1. A sketch of antenna and pertinent elevations are included as Figure 2.

Figure 4 are the horizontal and vertical plane radiation patterns for the proposed DTV antenna system.

Figure 3 is a map showing the DTV predicted coverage contour. The map provides the predicted F(50,90) noise limited contour. The extent of the contour has been calculated using the normal FCC prediction method. The Claremore city limits were derived from information contained in the 2000 U.S. Census of Population and Housing.

Allocation Considerations

The proposed KRSC-DT Channel 36 facility meets the requirements of Section 73.623 of the FCC Rules concerning predicted interference to other existing NTSC facilities and DTV allotments and assignments. Longley-Rice interference analyses were conducted pursuant to the requirements of the FCC Rules; OET Bulletin No. 69; and published FCC guidelines for preparation of such interference analyses. The Longley-Rice interference analyses were conducted using the software developed by du Treil, Lundin & Rackley, Inc. based on the FCC published software routines.² Stations selected for

² The du Treil, Lundin & Rackley, Inc. DTV interference analysis program is based on the program and procedures outlined by the FCC in

analysis were determined pursuant to the distance requirements outlined in the FCC DTV Processing Guidelines Public Notice. The results of the interference analyses for the proposed KRSC-DT facility are summarized herein at Figure 5.

As indicated therein, the proposed facility will meet the 2%/10% criterion outlined in the FCC Rules and published guidelines with respect to all considered stations.³

Radiofrequency Electromagnetic Field Exposure

The proposed KRSC-DT facilities were evaluated in terms of potential radiofrequency electromagnetic field exposure at ground level to workers and the general public. The radiation center for the proposed KRSC-DT antenna is located 247 meters (810 feet) above ground level. The effective radiated average power is 144 kilowatts. A relative field value of 0.2 is assumed for the antenna's downward radiation. As can be seen from Figure 4, the maximum downward relative field for depression angles greater than 10° does not exceed 0.2. The calculated power density at a point 2 meters above ground level is 0.003 mW/cm². This is less than five percent of the Commission's recommended limit of 0.40 mW/cm² for channel 36 in an "uncontrolled" environment.

the Sixth Report and Order; subsequent Memorandum Opinion and Order; and FCC OET Bulletin No. 69. A nominal grid size resolution of 2 km was employed.

³ Interference analysis results reflect the net change in interference to a given station considering the interference predicted to occur from all other stations (i.e. "masking") including the allotment facility for KRSC-DT. This properly reflects the net interference change for determining compliance with the FCC DTV2%/10% *de minimis* standard.

Access to the transmitting site is restricted and appropriately marked with warning signs. As this is a multi-user site, an agreement will control access to the site. In the event that workers or other authorized personnel enter restricted areas or climb the tower, appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure monitors or scheduling work when the stations are at reduced power or shut down.

TECHNICAL EXHIBIT
APPLICATION FOR MODIFICATION OF
DTV CONSTRUCTION PERMIT
STATION KRSC-DT
CLAREMORE, OKLAHOMA
CH 36 144 KW (MAX-DA) 455 M

Summary of Allocation Analysis

Facility	Channel	NTSC or DTV?	Baseline Service Population (1990)	Permissible IX(%)	Net New IX Caused by Proposed (1990)	Percent of Baseline (%)
<i>KRSC-TV Claremore, OK BPET-20021118ABV</i>	35	NTSC		<i>No Interference Predicted</i>		
<i>KRSC-TV Claremore, OK BLET-19920306KE</i>	35	NTSC		<i>No Interference Predicted</i>		
<i>KKAP(TV) Little Rock, AR BLET-20010514ABD</i>	36	NTSC		<i>No Interference Predicted</i>		
<i>KSCC(TV) Hutchinson, KS BLCT-20010116AHT</i>	36	NTSC	611,042	2.0	33	<0.1
<i>KMCI-DT Lawrence, KS BLCDT-20030808AAO</i>	36	DTV		<i>No Interference Predicted</i>		
<i>KMCI-DT Lawrence, KS DTV Allotment</i>	36	DTV		<i>No Interference Predicted</i>		
<i>KOMU-DT Columbia, MO BLCDT-20020701ABI</i>	36	DTV		<i>No Interference Predicted</i>		
<i>KOMU-DT Columbia, MO DTV Allotment</i>	36	DTV		<i>No Interference Predicted</i>
