Exhibit 34

The transmitting antenna for the proposed facility is to be located on an existing tower and will not have any environmental impact.

Compliance with RF Exposure Guidelines

There are 2 radiation sources located on this tower that have the potential to expose the general public to potentially harmful RF radiation.

1. This application proposes a transmitting antenna located 29 meters above ground level and will operate with a circularly polarized antenna with a power of 0.285 kw.. Analysis of this proposal using the OET Bulletin 65 guidelines shows that this proposed operation produces a worst case power density of 13.1 microwatts/sq. cm. 2 meters above ground level at the base of the tower. This is well below the allowed limit of 200 microwatts/sq. cm. and is only 0.4% of the allowed limit for an uncontrolled environment as outlined in OET Bulletin 65.
2. Radio Station KRSR(FM), (Facility ID 175355), has an antenna mounted on this tower 25 meters above ground level. KRSR(FM) operates with a power of 4 kw using horizontal polarization. Analysis of this facility using the OET Bulletin 65 guidelines shows that this facility produces a worst case power density of 252.5 microwatts/sq. cm. at a height of 2 meters above ground. This represents 126% of the allowed radiation of 200 microwatts/sq. cm. at the normal height of an individual, (2 meters above ground).

There are no other radiation sources located on this tower that need to be considered in the RF Exposure evaluation.

The facilities proposed in this application contribute less than 1% of the allowed limit at the base of the tower and the applicant believes it is exempt from proceeding further with its power density analysis, however, if requested by the Commission, it will submit a revised RF analysis to show compliance with the 200 microwatt/sq. cm. limit prior to initiating program tests, or will submit a power density survey of the site demonstrating compliance with OET Bulletin 65 along with its application for program test authority.

The applicant will cooperate with other users of this site to ensure that maintenance personnel are not subjected to potentially harmful radiation. While maintenance personnel are working on the tower the applicant will reduce power or terminate transmitter operation as may be necessary to minimize the risk of exposure to potentially harmful RF radiation to maintenance personnel.

CERTIFICATION

This engineering statement has been prepared by the undersigned and is true and correct to the best of his knowledge and belief, and is submitted in good faith. My qualifications are a matter of record before the Commission.

The undersigned is aware that this document is being filed with the Federal Communications Commission in connection with FCC Form 301-FM filed by Hispanic Target Media, and hereby consents to its use for that purpose.

Dated this 17th day of August 2011.

Respectfully,

A handwritten signature in black ink, appearing to read "F. W. Hannel", written over a horizontal line.
