

Affidavit Certification and Qualifications of Supervising Engineer

In support of FCC Form 302 - KJFT FM 90.3 MHz Arlee, MT
FCC File Number **BMPED-20070323ADZ**
Facility ID # **93587**

The proposed facility is constructed as permitted in the current Construction Permit FCC File Number BMPED-20070323ADZ. I have supervised all aspects of the KJFT transmission site construction, and the directional antenna assembly and installation. I certify that the directional antenna is constructed and installed to the exact specification of the antenna manufacturer. The installed antenna is a new PSI (Propagation Systems Inc.) FMR-2-DA two bay end fed rototiller design which was factory tuned by PSI. This configuration was tested by PSI on a similar tower structure for directional characteristics as specified in the construction permit. The specifications and results are published by PSI in a separate document dated March 13, 2007.

The tower structure and orientation are as specified in the configuration used by PSI in tuning and testing of the installed antenna. The orientation of both the tower structure and the antenna mounting was confirmed by a professional surveyor licensed in the state of Montana.

I certify, under penalty of perjury that I am an experienced broadcast engineer and that I am familiar with all pertinent aspects of the FCC regulations with regard to this project. I hold a General Class Radiotelephone Operators Permit, having received my First Class Radiotelephone Operators Permit in 1978. I have been continuously employed or operated my own full time business in the field of broadcast engineering since 1978. I have had full responsibility for the construction and start up of at least 16 full power FM broadcast stations.

Conrad L. Agte
Contract Engineer for
CSN International
