

Exhibit for AM Facility KROE

This facility proposes to move to an existing tower that is located nearby to KROE, 930 kHz Sheridan, WY. Specifically, KVLZ proposes to locate their facility to an existing tower that is 14 meters from the KROE array.

This exhibit addresses the possibility that should the FCC grant the facility contemplated herein, that a Special Operating Condition will be attached to the construction permit, which would deal with the potential adverse affects to the array of AM station KROE. Typically, these conditions would require a partial proof of performance on KROE be conducted both before and after construction of the facilities authorized by the construction permit. We believe that this condition would be unnecessary, as the one bay antenna for KVLZ is to be mounted on an existing tower, and is therefore unlikely to have any significant affect on the AM station's array.

More recent construction permits for FM facilities have updated AM proximity conditions such as the following:

If the antenna is mounted on an existing tower that is not base-insulated or detuned at the AM frequency, the permittee shall submit a certification to this effect.

We certify that the antenna for KVLZ is proposed to be mounted on a pre-existing grounded steel tower, and respectfully request that no condition for a partial proof be placed on the construction permit.

Respectfully submitted,

David Velasquez
