**December 2004**

**TECHNICAL STATEMENT**

This Technical Statement and attached exhibits is prepared on behalf of Miller Communications, Inc. ("MCI"), licensee of FM station WWBD, Channel 239A, Bamberg, South Carolina. Miller also holds an outstanding construction permit to upgrade to Channel 239C3 and relocate WWBD (BPH-20031031ADP) and has a modification of that construction permit on file (BMPH-20040429AAY). Miller herein proposes to amend the pending the pending application by relocating the WWBD transmitter site, increasing the center of radiation above ground and mean sea level and reducing the power.

The site specified in BMPH-20040429AAY, while meeting FCC limitations, encountered unexpected opposition from the Federal Aviation Administration. Miller has been careful to select an alternate location which we believe is clear of further FAA limitations. Since Miller is proposing to install the WWBD antenna system on a new tower structure, the Federal Aviation Administration has been apprised of this proposal. When the expected Determination of No Hazard is received, the tower will be registered with the Commission.

It is noted that at the site proposed for the implementation of the upgrade, Channel 239C3 would be shortspaced to one other station, therefore, processing pursuant to §73.215 is requested. See Exhibit A for details. All remaining documentation used to certify the technical portion of FCC Form 301 has been forwarded to Miller and is available for submission to the Commission upon request.
