RE: Permit File No. BMPH-20040809AAN
KHAR/KUDO Tower Impedance Measurements

As Chief Engineer for KHAR and as manager of the broadcast site where this station and KUDO are located, I certify that no antenna or tower changes were made to accommodate the changes to KEAG. Therefore, there was no need to measure the impedance of the tower or to determine operating power of KHAR or KUDO by the indirect method.

If you require any further information, I am happy to provide it for you.

Thank you,
