

Exhibit 12

New FM Translator Station BNPFT-20170726AHE

Proposed CH 267D – 101.3 MHz – 0.250 KW

Mitchell, SD

November 7, 2017

Technical Narrative

This Technical Narrative and attached exhibits were prepared on behalf of Nedved Media, LLC (“Nedved”), licensee of Class C AM Station KORN 1490 kHz, Facility ID No. 35420, Mitchell, SD. Nedved herein is filing an FCC Long Form 349 application to complete the application for BNPFT-20170726AHE for a new FM translator at Mitchell, SD. KORN did not participate in the 2016 250 mile AM filing window and therefore is eligible for the first AM filing window for new FM translators for Class C and D AM stations.

The proposed new facility will be used as a fill-in translator for co-owned primary station KORN(AM), licensed to Mitchell, SD,. The proposed new facility would operate on Channel 267D (101.3 MHz) with 250 watts non-directional with the transmit antenna located at 89 meters height above ground level and 88 meters HAAT. Exhibit 10 demonstrates that the proposed FCC F(50,50) 60 dBu contour of the new facility is contained within the KORN 2.0 mV/M daytime contour. Therefore it is believed that this application is in compliance with Section 74.1201(g) of the Commission’s rules.

Exhibit 13-A is a channel study that assumes a Class A 6 kW facility operating on channel 267 and is provided to FCC staff as a convenience to help identify potential contour overlap issues. No interference will be delivered or received from any existing FM translator station or low power FM (LPFM) facility.

A study has been undertaken to show the proposed facility is in compliance with the Commission's radio frequency emission limits and is attached as Exhibits 17-A and 17-B.
