DeLawder Communications, Inc.

P.O. Box 1095

Ashburn, Virginia 20146-1095

Ref: K241CI and K266CG

Dear MrDeLawder,

We do not see any adverse effect to the directional pattern of K241CI from the K266CG antenna system.

The separation between K266CG and K241CI is 17 feet that is more than the minimum of 15 feet that we recommend.

The 7/8 inch diameter coaxial transmission line used to feed K266CG that passes through the aperture of the K241CI antenna is attached to the tower and completely hidden from the pattern of the K241CI antenna. For this reason the feeding line of the K266CG will have no adverse effect on the K241CI pattern.

If you have any additional questions do not hesitate to call.

Sincerely

Frank Piagentini

A handwritten signature in blue ink, appearing to read 'Frank Piagentini', with a stylized flourish at the end.
