

EXHIBIT E-2
ENVIRONMENTAL COMPLIANCE
K269FR ESTES PARK, COLORADO K269D
MOUNTAIN COMMUNITY TRANSLATORS, LLC
FCC FORM 349
MARCH 2009

The proposed operation of K269FR will radiate only 84 Watts Effective Radiated Power. Because the total ERP from the combined operation is less than 100 Watts, it is categorically exempt from environmental processing.

The licensee, Mountain Community Translators, LLC certifies that it will cooperate with tower personnel and other users of the tower to either reduce power to safe operating levels or cease transmissions while maintenance is performed on the tower.

The applicant assumes full responsibility for remedying the complaints of blanketing interference for a period of one year. With the low proposed ERP of 84 Watts and the fact that the transmitter site is not populated, no blanketing interference issues are anticipated.
