RE: KIMO(FM) Directional Antenna Certification

Dear Mr. Terry:

Today we were on the site of the KIMO(FM) directional antenna on Hogback Mountain to verify the tower orientation of the KIMO(FM) antenna.

On our previous visit to the site on July 29, 2011, the azimuths of the guy wires and their respective tower legs were measured to be pointing at 91, 211, and 331 degrees true (+/- 2 degrees) relative to center of the tower.

Today, we verified that the Shively 6 bay antenna had been installed on the 211 degree leg with its radiating elements pointed at 211 degrees true (+/- 2 degrees) relative to tower leg.

This letter is to certify that these are the locations as surveyed.

Sincerely,
