

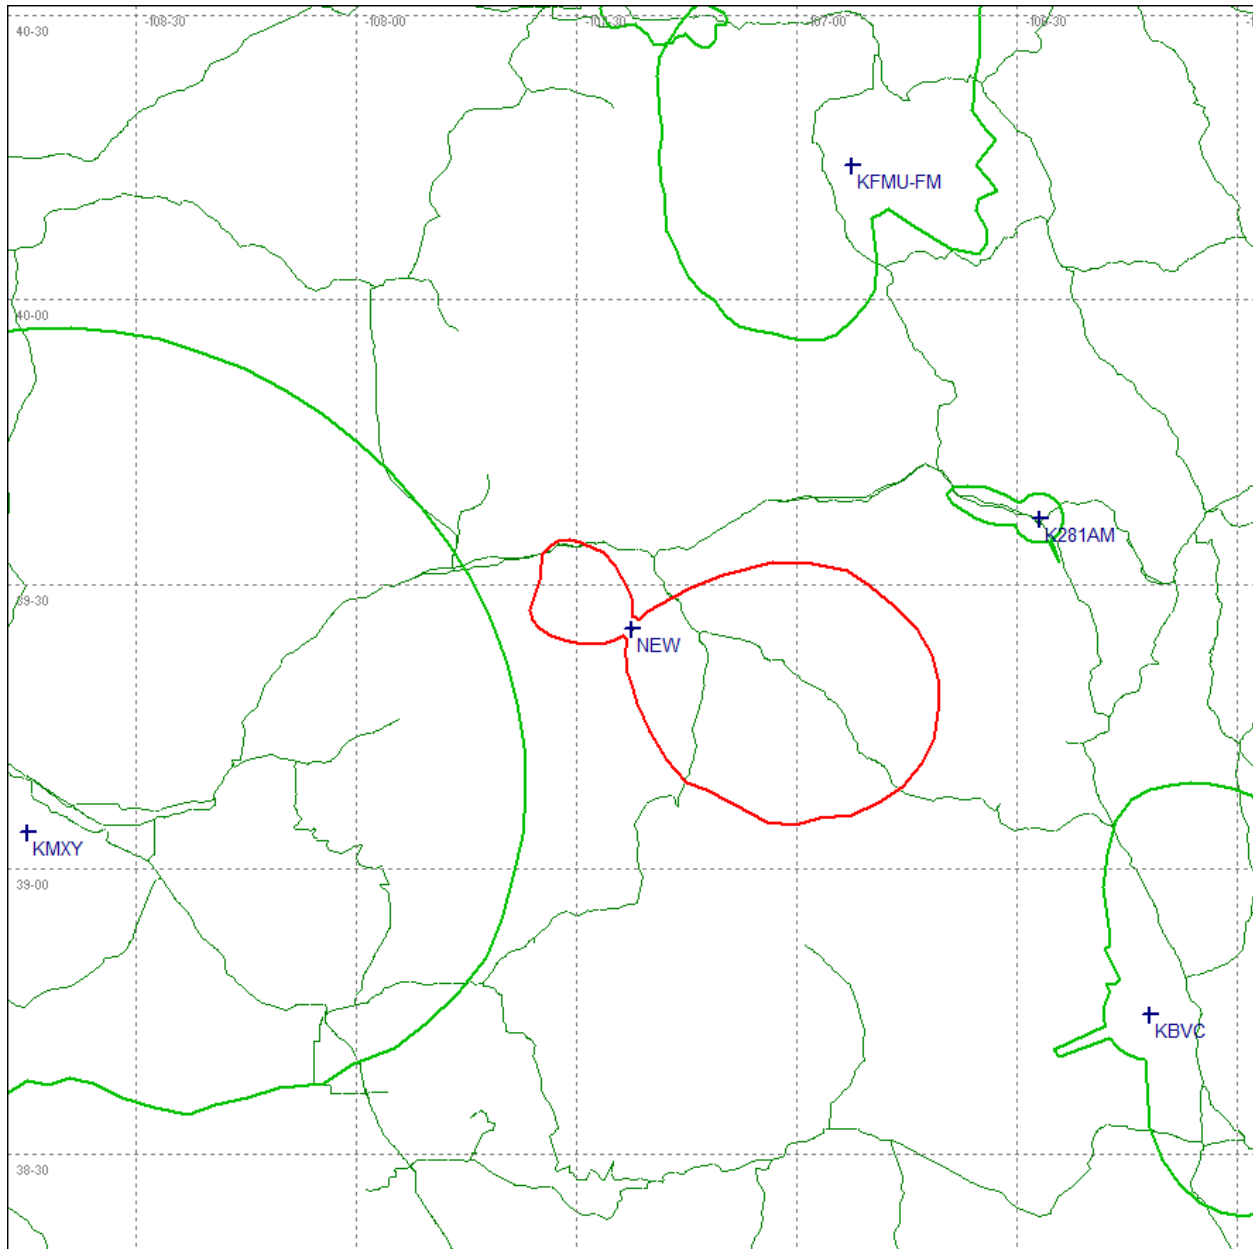

Exhibit 13

No Preclusion Showing is included as this proposal is far from any LPFM Appendix A or Top-50 spectrum limited markets.

The following map shows the 40 dBu 50,10 interfering contour of the proposed facility (NEW), and the 60 dBu 50,50 protected contours of the surrounding co- and adjacent channel stations. There is no overlap.

There is overlap with some 2nd and 3rd adjacent channel stations, notably KKVM and KSNO. However, there is no population within the 100 dBu 50,10 contour of the proposed facility as shown on the map below.

The proposed site is a remote communications site in the White River National Forest, and there are no homes, businesses, or roads in the area, except for other unmanned communications sites and the site access road.

With no population in the interfering contour, there will be no interference to 2nd and 3rd adjacent channel stations.

If a waiver is required, applicant hereby requests one.
