

**MINOR CHANGE APPLICATION**  
**POSITIVE ALTERNATIVE RADIO, INC.**  
**W226AT FM TRANSLATOR STATION**  
**CH 226D - 93.1 MHZ - 0.045 KW**  
**CHRISTIANSBURG, VIRGINIA**  
**September 2011**

**TECHNICAL STATEMENT**

This technical statement was prepared on behalf of Positive Alternative Radio, Inc. ("PAR"), licensee of FM translator station W226AT, Channel 226D, Christiansburg, Virginia. PAR herein proposes to make minor changes in the W226AT facilities by increasing the height of the center of radiation above ground and above mean sea level, with a slight increase in effective radiated power. The proposed changes will be made at the existing W226AT tower. The proposed W226AT facility will rebroadcast the signal of AM station WKNV, 890 kHz, Fairlawn, Virginia. As the proposed W226AT 60 dBu contour is completely encompassed by the 2.0 mV/m contour of WKNV, as well as being within a 25.0 mile (40.0 kilometer) radius of the WKNV site, the proposed W226AT is considered a fill-in translator (Exhibit A).

Since PAR is proposing to make the requested changes at the licensed W226AT tower site, there is 60 dBu contour between the licensed W226AT and the 60 dBu contour of the proposed W226AT. The proposed location for W226AT is not in a spectrum limited market based on Appendix A, Third Further Notice of Proposed Rule Making, FCC-11-105, MM Docket #99-25/MB Docket #07-172, released July 12, 2011.

The proposed W226AT antenna system will be located on an existing tower structure that has been registered with the Commission and has been assigned Antenna Structure Registration

Number 1238674. In order to accommodate the proposed increased height of the antenna for W226AT, it is necessary to increase the height of the tower. As such, the Federal Aviation Administration was apprised of this proposal. When the expected updated Determination of No Hazard is received, ASRN 1238674 will be modified. Exhibit B is a study demonstrating that the proposed W226AT translator will not cause interference to any full service station, nor will interference be delivered to or received from any existing FM translator station or LPFM application.

As the W226AT antenna system is located on one of many towers in the same general vicinity, use of the worksheet associated with Form 349 was not possible to demonstrate compliance with the FCC radio frequency radiation exposure rules. Therefore, attached as Exhibit C is a study which shows this proposal complies with the RF exposure limits.

All supporting data used in the preparation of this application has been forwarded to PAR and is available for submission to the Commission upon request.<sup>1</sup>
