Minimum spacings listed above are based on the assumption that the proposed translator is a Class A FM facility, except as noted. Compliance with contour protection requirements towards short-spaced and closely-spaced stations is demonstrated in Exhibit 12B.

Note 1: Canadian FM facility. As the proposed 34 dBu F(50,10) interference contour is entirely within US territory, no prohibited interference will be caused.

Note 2: W297BI is presently operating on Channel 297 with these facilities under program test authority, pending grant of license application BLFT- 20130809ADB.
