ERI sent to KQVT the complete pattern on our 6 bay directional antenna. Included was the drawings showing the placement of antenna with brackets and reflectors on tower. After carefully checking the paper work I watched the tower crew install this antenna as per specifications from antenna manufacture on the tower. The antenna was installed on the correct tower face at 211 degrees true. The antenna was installed in a very professional way.

  
Engineer  
KQVT-FM

I CHARLES SMITHEY have been in broadcasting since 1960 working both in radio and television. I was chief engineer of 4 television stations and several FM stations. I also do engineering consulting including complete building and remodeling of stations. I am presently contract engineer for 5 FM radio stations and 2 low power TV stations.
