ENGINEERING TECHNICAL STATEMENT PREPARED BY WILLIAM T. GODFREY OF THE FIRM KESSLER AND GEHMAN ASSOCIATES, INC., TELECOMMUNICATIONS CONSULTING ENGINEERS, IN CONNECTION WITH A MINOR MODIFICATION OF CONSTRUCTION PERMIT APPLICATION TO MAKE CHANGES TO THE ALABAMA EDUCATIONAL TELEVISION COMMISSION'S ("AETC") DIGITAL BROADCAST FACILITY, WIIQ-DT CHANNEL 19, DEMOPOLIS, AL.

The firm Kessler and Gehman Associates, Inc. was retained by the Alabama Educational Television Commission ("AETC"), Birmingham, Alabama to prepare engineering studies and the engineering portion of a minor modification of construction permit application which requests FCC authorization to change the antenna system and the antenna height radiation center.

Discussion

The AETC currently has a construction permit (BMPEDT-20000501AIV) to build and operate WIIQ-DT on DTV Channel 19 with an ERP of 1,000 kW at an antenna height radiation center of 285 meters above ground level ("AGL") using a Dielectric model TFU-31JSC P230 directional side-mount antenna. The AETC is licensed to operate WIIQ-TV on NTSC Channel 41 with an ERP of 1,950 kW at an antenna height radiation center of 296 meters above ground level ("AGL") using a Harris model TWSC-30P directional antenna (peanut).

The AETC filed a maximization application for construction permit back in May 2000 to meet the FCC's maximization filing deadline. Since that time the AETC awarded TCI their antenna contract which called for a TCI-888 antenna for the WIIQ-DT facility, however, TCI was bought out by Dielectric and the antenna contract had to be amended. The AETC decided to purchase the Dielectric model TUF-P4-12/48H-1 broadband directional antenna (peanut) in order to combine the WIIQ-TV Channel 41 and WIIQ-DT Channel 19 radio frequencies.

This minor modification of construction permit application requests authority to do the following: 1) change antennas from the authorized Dielectric model TFU-31JSC P230 directional side-mount antenna (peanut) to the proposed Dielectric model TUF-P4-12/48H-1 broadband directional top-mount antenna (peanut); and 2) increase the antenna height radiation center. The antenna height radiation center would increase because the authorized side-mount antenna would be superseded by the proposed top-mount antenna.

Exhibit 12 is an FCC contour map depicting the authorized F(50,90) 39.3 dBuV/m noise limited contour (black) and the proposed F(50,90) 39.3 dBuV/m noise limited contour (red). Exhibit 12 verifies that the proposed noise limited contour exceeds the authorized noise limited contour in various azimuthal directions. Exhibit 14 is an antenna azimuth pattern relative field comparison spread sheet which compares the relative field values between the authorized antenna and the proposed antenna. The far right column depicts "OK" if the proposed azimuth pattern relative field values are less than or equal to the authorized azimuth pattern relative field values and depicts "ERROR" if the proposed azimuth pattern relative field values are greater than the authorized azimuth pattern relative field values. As you can see, the proposed antenna azimuth pattern relative field values are greater than the authorized antenna azimuth pattern relative field values at 30°, 40°, 50°, 130°, 140°, 150°, 210°, 220°, 230°, 310°, 320° and 330°. The proposed antenna height radiation center would be higher than the authorized antenna height radiation center since the proposed antenna is a top-mount and the authorized antenna is a side-mount. Therefore, Exhibit 12 shows that the authorized facility's noise limited contour would not completely encompass the

proposed facility's noise limited contour. Exhibit 15 goes into even more detail by comparing the distance to contour values of the authorized and proposed noise limited contours. Exhibit 15 shows that the proposed facility's noise limited contour would exceed the authorized noise limited contour on 228 out of the 360 radials. Since the proposed facility's noise limited contour would exceed the authorized facility's noise limited contour in multiple azimuthal directions, it is necessary to perform interference studies to show that the proposed facility would not cause unacceptable interference to any applicable surrounding stations.

Exhibit 13 is a principal community coverage map which verifies that the proposed principal community contour would encompass the entire principal community of Demopolis, AL.

Interference Studies (Waiver Requested)

The Longley-Rice interference studies were performed using a Sun Microsystems SPARC 5 computer work station loaded with the FCC's TV Interference and Spacing Analysis software (Exhibit 16).

Spacing violations were found between the following stations:

- | | |
|---------------------------------------|----------------|
| • WMAH-TV CH 19 | BILOXI, MS |
| • WLDM-TV CH 23 (LICENSE) | TUSCALOOSA, AL |
| • WLDM-TV CH 23 (CONSTRUCTION PERMIT) | TUSCALOOSA, AL |

The interference studies depicted in Exhibit 16 verify that the proposed WIIQ-DT Channel 19 station would not cause unacceptable interference to WMAH-TV, WLDM-TV CH 23 (License) or WLDM-TV CH 23 (Construction Permit).

The proposed facility would not violate the following: 1) FCC Monitoring stations; 2) West Virginia quiet zone; 3) Table Mountain; 4) Canadian mileage spacing; 5) Mexican mileage spacing; or 6) AM broadcast stations.

The proposed facility would have contour overlap to the WOTM-L Class A station as mentioned in Exhibit 16. Exhibit 16 identifies the Class A station as W19CB Channel 19, Montevallo, AL but that call sign was changed from W19CB to WOTM-L on January 24th, 2001.

Exhibit 17 depicts the WOTM-L facility's F(50,50) 74.0 dBuV/m protected contour as well as the authorized WIIQ-DT facility's and proposed WIIQ-DT facility's F(50,90) 39.3 dBuV/m protected noise limited contours. The purpose of this exhibit is to show the location of the Class A station relative to the location of the WIIQ-DT station and to pictorially show the relation between the proposed and authorized facility's noise limited contours to that of the Class A facility's protected contour.

Exhibit 18 verifies that the WIIQ-DT proposed and authorized F(50,10) 40.0 dBuV/m interfering contours would overlap the WOTM-L F(50,50) 74.0 dBuV/m protected contour. Therefore, the AETC requests a waiver to make full use of terrain shielding and Longley-Rice terrain dependent propagation methods.

Exhibits 19 and 20 are detailed WOTM-L Channel 19 Class A Longley-Rice interference studies. The studies were run to show that the proposed WIIQ-DT Channel 19 facility would cause 0.5% interference, or less, to the WOTM-L Class A facility. In support of a request for waiver of the interference protection requirements of §73.623(c)(5)(iii), an applicant for a DTV broadcast station may make full use of terrain

shielding and Longley-Rice terrain dependent propagation methods to demonstrate that the proposed facility would not be likely to cause interference to Class A TV stations. As you can see by referring to Exhibit 19, the WOTM-L Channel 19 facility is predicted to receive 0.516% interference from all surrounding stations, including the authorized WIIQ-DT Channel 19 station. Exhibit 20 shows that the WOTM-L Channel 19 facility is also predicted to receive 0.516% interference from all surrounding stations, including the proposed WIIQ-DT Channel 19 station. Therefore, the proposed WIIQ-DT Channel 19 facility would not introduce any new interference to the WOTM-L Class A station and accordingly, complies with the FCC's rules with respect to Class A station protection.

Transmitter Site

The proposed WIIQ-DT antenna is a top-mount Dielectric model TUF-P4-12/48H-1 horizontally polarized, directional (peanut), broadband antenna. The tower is registered with the FCC and the registration number is 1036416. The support structure is located approximately 6 miles northwest of Linden, AL. The proposed antenna height radiation center is 296.3 meters AGL. The overall height of the support structure is 304.5 meters AGL as depicted in the FCC antenna structure registration and Exhibit 3's elevation view of the support structure.

Exhibits

Exhibits 1 and 2 represent WIIQ-DT's administration data, antenna and antenna structure specifications.

Exhibit 3 depicts the profile view of the proposed antenna on the antenna structure with all the appropriate elevations.

Exhibits 4 and 5 display the elevation pattern and Exhibit 6 displays the elevation pattern tabulation.

Exhibits 7 and 8 display the azimuth pattern and azimuth pattern tabulation respectively.

Exhibits 9 and 10 display the ERP-dBk pattern and tabulation respectively.

Exhibit 11 depicts the location of the WIIQ-DT site on a 7.5-Minute (Series) Topographic map.

Exhibit 12 depicts the WIIQ-DT Channel 19 authorized noise limited contour and the proposed WIIQ-DT Channel 19 noise limited contour and depicts the area where the proposed pattern exceeds the authorized pattern.

Exhibit 13 depicts the proposed WIIQ-DT noise limited and principal community contours, boundaries of the principal community to be served, and the transmitting location with radials every 45°.

Exhibit 14 is an antenna azimuth pattern relative field comparison spread sheet which compares the relative field values between the authorized antenna and the proposed antenna.

Exhibit 15 compares the distance to contour values (km) of the authorized and proposed noise limited contours.

Exhibit 16 is a detailed Longley-Rice interference study of proposed WIIQ-DT Channel 19 station to all applicable surrounding stations.

Exhibit 17 depicts the WOTM-L facility's F(50,50) 74.0 dBuV/m protected contour as well as the authorized WIIQ-DT facility's and proposed WIIQ-DT facility's F(50,90) 39.3 dBuV/m protected noise limited contours.

Exhibit 18 verifies that the WIIQ-DT proposed and authorized F(50,10) 40.0 dBuV/m interfering contours would overlap the WOTM-L F(50,50) 74.0 dBuV/m protected contour.

Exhibits 19 and 20 are detailed WOTM-L Channel 19 Class A Longley-Rice interference studies.

Environmental Impact

The proposed construction will have no significant environmental impact as defined in §1.1307 of the FCC Rules. The DTV transmitter, 6-1/8 inch (75-ohm) transmission line and antenna system will produce an ERP of 1,000 kW. It was determined that the maximum lobe of radiation from the base of the tower out to approximately 1,468.5 feet occurs at approximately 197.8 feet from the base of the tower. At approximately 197.8 feet from the base of the tower, the depression angle of the main lobe is 78.5° below the horizontal. At that point, the relative field is 0.045 and the power density six feet above the ground is 0.00078 mW/cm². This is 0.05% of the maximum permissible exposure ("MPE") limits for Occupational/Controlled Exposure and 0.23% of the MPE limits for General Population/Uncontrolled Exposure authorized by the American National Standards Institute ("ANSI"). Since the proposed operation of WIIQ-DT Channel 19 would not exceed 5.0% of the MPE limit for Occupational/Controlled Exposure or General Population/Uncontrolled Exposure at any point on the ground, WIIQ-DT would not be considered a "significant contributor" to the RF exposure environment pursuant to OET Bulletin 65, Edition 97-01. Therefore, contributions of exposure from other sources were not accounted for in this analysis. It is safe to conclude that the emissions would be insignificant and well within the maximum allowable requirements.

If other antennas are placed on the tower in the future, the applicant will cooperate with those users by reducing or completely terminating the power to the antenna when maintenance workers are in danger from the electromagnetic radiation emanating from the antenna.

Certification

This technical statement was prepared by William T. Godfrey, Telecommunications Consultant with Kessler and Gehman Associates, Inc. having offices in Gainesville, Florida and has been working in the field of radio and television broadcast consulting since 1998. He graduated from the University of North Florida with a Bachelor of Arts degree in Criminal Justice and a minor in Mathematics in 1993. As a Professional in the field of Telecommunications he states under penalty of perjury that the information contained in this report is true and correct to the best of his knowledge and belief.

EXHIBIT 18

Class A Interference Study Population Report

WOTM-L (19+) Montevallo, AL - BLTTL19970514JI
TV Incoming Interference Study
Signal Resolution: 2 km
Consider NTSC Taboo: Yes
of radials computed for contours: 36
Contours calculated using 8 radial HAAT.
LR Profile Spacing Increment: 1.0 km
Interference considered within the reference station's 74 dBu FCC contour.
Using NTSC lptv/translators D/U rules.
Threshold for reception: 74.0

Study Date: 7/22/2003
TV Database Date: 07-22-03

Population Database: 1990 US Census

Percentages calculated using a baseline population of 19,181.

Stations which cause interference:

Call Letters	H Units	Population	%	Area (sq. km)
WIIQ-DT CP (19)	36	99	0.516	8.18

Masking Summary:

Call Letters	Total Interference Population	Unique Interference Population	Total Interference %	Unique Interference %
WIIQ-DT CP (19)	99	99	0.516	0.516

Stations considered which do not cause interference:

WAIQ (26+)
WCFTTV (33Z)
WCOVTV (20Z)
WGCL-D (19)
WHNTTV (19Z)
WTTO (21-)

Call Letters	City	State	Dist	Bear
WAIQ (26+)	Montgomery	AL	99.8	149.1
WCFTTV (33Z)	Tuscaloosa	AL	66.1	303.3
WCOVTV (20Z)	Montgomery	AL	104.4	150.3
WGCL-D (19)	Atlanta	GA	243.0	72.0
WHNTTV (19Z)	Huntsville	AL	178.0	9.0
WTTO (21-)	Homewood	AL	36.8	4.3
WIIQ-DT CP (19)	Demopolis	AL	130.5	228.0

Totals for WOTM-L (19+)

Calculation Area Population:	18,684	(282.1 sq. km)
Not Affected by Terrain Loss:	18,220	(278.0 sq. km)
Total NTSC Interference:	0	(0.0 sq. km)

DTV Only Interference:	99	(8.2 sq. km)
Total DTV Interference:	99	(8.2 sq. km)
Interfered Population:	99	(8.2 sq. km)
Interference Free:	18,121	(269.8 sq. km)
Percent Interference:	0.52		
Terrain Blocked Population:	464	(4.1 sq. km)
Contour Area Population:	19,181
