

Community Coverage Compliance with 73.515

The proposed minor modification of KVKL meets the requirements of Section 73.515 with regard to 1 mV/m contour community of license coverage.

1 mV/m contour coverage map

Community Coverage Compliance with 73.515

1 mV/m Contour Area & Population

The area of the 1 mV/m contour was calculated by averaging the distance to the 1 mV/m contour between 10 degree increments and using the following formula:

Distance (km) squared X 3.1416 / 36

These values were then added for the resulting total 1 mV/m contour area of 6,831.23 sq. km.

There are no major bodies of water or foreign territory included in the area calculations.

The population of 1,067,217 of the 1 mV/m contour was calculated using a computer program that determines population (2000 Census data) using the block centroid retrieval method, based on a set of reference geographical coordinates and the distances (km, 10 degree increments) to the 1 mV/m contour.
