Work ordered by: Mr. Rick Jesse
RF: Antenna and tower as-built certification of tower site near Cabool, Mo.
Situated in Section 11, Twp 28, Rng 10, Texas Co. Mo.

Dear Mr. Jesse,

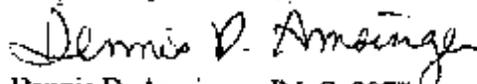

With this letter I hereby certify that on March 23, 2009, I made an on site check of the above referenced antenna system.

Using National Geodetic Survey (N.G.S.) Monument Cabool Port and azimuth marker Cabool Port AZ.MK, published by National Geodetic Survey. A G.P.S. survey was performed from the above monument to the tower site and I found the conditions to be as follows:

- 1) The anchors radiating from the three-sided tower are installed at "true north" or "astronomic north", with azimuths of 286° , 166° , and 46° , (within $\pm 001^{\circ}$ each) and,
- 2) The antenna is mounted on, and perpendicular to, the side of the tower that faces in the direction of 92° (within $\pm 001^{\circ}$); therefore I have concluded that the antenna is oriented to face 92° "true north" azimuth, $\pm 001^{\circ}$.

Should you have any questions or comments, please advise.

Respectfully submitted,

Dennis D. Amsinger, P.L.S. 2077
